Burroughs Wellcome in the USA and the Wellcome Trust Roy A. Church, E. M. Tansey, 2015 **The Science and Business of Drug Discovery** Edward D. Zanders, 2011-07-08 The Science and Business of Drug Discovery is written for those who want to learn about the biopharmaceutical industry and its products whatever their level of technical knowledge Its aim is to demystify the jargon used in drug development but in a way that avoids over simplification and the resulting loss of key information Each of the nineteen chapters is illustrated with figures and tables which clarify some of the more technical points being made Also included is a drug discovery case history which draws the relevant material together into a single chapter In recognizing that it is difficult to navigate through the many external resources dealing with drug development the book has been written to guide the reader towards the most appropriate information sources including those listed in the two appendices The following topics are covered Different types of drugs from small molecules to stem cells Background to chemistry of small and large molecules Historical background to drug discovery pharmacology and biotechnology The drug discovery pipeline from target discovery to marketed medicine Commercial aspects of drug discovery Challenges to the biopharmaceutical industry and its responses Material of specific interest to technology transfer executives recruiters and pharmaceutical translators *A Global Vision for the National Library of Medicine* National Library of Medicine (U.S.). connections Today's science museums descend from the Kunst und Wunderkammern of the Renaissance collectors' private cabinets of curiosities through the Crystal Palace exhibition of 1851 to today's interactive exhibits promising educational fun. In this book Michael John Gorman issues a provocative call for the transformation of science museums and science centers from institutions dedicated to the transmission of cultural capital to dynamic idea colliders that spark creative collaborations and connections. This new kind of science museum would not stage structured tableaux of science facts but would draw scientists into conversation with artists, designers, policymakers and the public. Rather than insulating visitors from each other with apps and audio guides, the science museum would consider each visitor a resource bringing questions, ideas and experiences from a unique perspective.
