YARDAGE PRO™ Your YARDAGE PRO™ 500 is a precision instrument designed to provide many years of enjoyment. This booklet will help you achieve optimum performance by explaining its adjustments and features as well as how to care for this fine instrument. To ensure optimal performance and longevity, please read these instructions before using your YARDAGE PRO™ 500.

INTRODUCTION The YARDAGE PRO™ 500 emits invisible, eye-safe, infrared energy pulses. Sophisticated circuitry and a high speed clock are used to instantaneously calculate distances by measuring the time it takes for each pulse to travel from the rangefinder to the target and back.

The ranging accuracy of the YARDAGE PRO™ 500 is plus or minus one yard / meter under most circumstances (see description of "Precision" indicator below). The maximum range of the instrument depends on the reflectivity of the target. The maximum distance for most objects is 500 yards / meters while for highly reflective objects the maximum is 999 yards / meters. *Note: You will get both longer and shorter maximum distances depending on the reflective properties of the particular target and the environmental conditions at the time the object is being distanced to.*

The color, surface finish, size and shape of the target all affect reflectivity and range. The brighter the color, the longer the range. Red is highly reflective, for example, and allows longer ranges than the color black, which is the least reflective color. A shiny finish provides more range than a dull one. A small target is more difficult to range than a larger target. The angle to the target also has an effect. Shooting to a target at a 90 degree angle (where the target surface is perpendicular to the flight path of the emitted energy pulses) provides good range while a steep angle on the other hand, provides limited ranging. In addition, lighting conditions (e.g. the amount of sunlight) will affect the ranging capabilities of the unit. Too less light (e.g. overcast skies) the farther the unit's maximum range will be. Conversely, very sunny days will decrease the unit's maximum range.

OPERATIONAL SUMMARY While looking through the monocular, depress the fire button (see Figure 1) (top right hand side of unit) once to activate the view display system (VDS). Aim the YARDAGE PRO™ 500 at a target at least 20 yards away. **Depress and hold the fire button down until range reading is displayed.** Release the fire button. *Note: Once activated the YARDAGE PRO™ 500's LCD will remain active and display the first distance measurement for 30 seconds.* You can depress the fire button again at any time to distance to a new target. *As with any laser device, it is not recommended to directly view the emissions for long periods of time with magnified lenses.*

FEATURES The YARDAGE PRO's sophisticated circuitry allows you to select between various units of measure and targeting modes. In addition, your YARDAGE PRO's LCD incorporates illuminated indicators that advise you when the laser is active, what the quality level (a measure of reflectivity) of the target is, what the precision tolerances of a specific measurement are and when the battery charge is low (see Figure 2). A summary of these features is presented below.

Unit of Measure Options The YARDAGE PRO™ 500 can be used to measure distances in yards or meters. The unit of measure indicators are located in the lower right portion of the LCD. To select between yards and meters look through the monocular, depress the "mode" button (see Figure 3) (lower right side of the unit) and hold it down for approximately 5 seconds. If you are changing from yards to meters, a change in unit of measure will be indicated by the illumination of the METERS indicator while the YARDS indicator is turned off. If you are changing from meters to yards, the opposite will occur. *Note: The YARDAGE PRO™ 500 will return to the last setting used each time the unit is turned-on.*

Targeting Modes The YARDAGE PRO™ 500 incorporates exclusive targeting modes that allow you to adjust the performance parameters of the unit to suit your specific situation and environment. The different targeting modes available are listed below:

STANDARD (LCD Indicator - "STND") - This setting allows most targets to be distanced up to 500 yards. Used for moderately reflective targets that are typical of most distancing situations. *Note: If the user encounters difficulty ranging to targets in the standard mode, the other modes listed below can be used. The minimum distance in the standard mode is 20 yards.*

SCAN (LCD Indicator - "SCAN") - This mode allows the range to be continuously updated for 10 seconds when the fire button remains depressed. It can be used to scan an area containing several objects or a single object that is moving. *Note: Objects farther away require a slower scanning pace than objects at a closer distance. The minimum distance in this mode is the same as in the standard mode.*

REFLECTIVE (LCD Indicator - "REFL") - Used when targeting highly reflective targets (e.g. reflectors, stop signs, etc.). Increases effective distance of the device on reflective targets up to 999 yards or meters. *Note: In this mode, the unit's sensitivity to non-cooperative targets is*
