## Environmental Systems

Describe what happened to the system of the Aral Sea in terms of its inputs, outputs, and size.

The Aral Sea is used to be the fourth largest sea on the planet and people used to grow rice and cotton and it wasn't very efficient irrigation. Then in 2014, it became a desert.

What happened to the water to the sea? It was evaporated. The water was used for irrigation.

What type of system is Earth with respect to matter? What about energy? Earth is a closed system (it is the atom that makes up) and it is conserved on earth. It is an open system.

What does the First Law of Thermodynamics state? How does this relate to the Earth system? "Energy cannot be created or destroyed, it can only change form or be transferred to another system." The Earth system is a closed system with respect to matter, but it is an open system with respect to energy. The energy it gets from the sun is used to create oxygen.

What does the Second Law of Thermodynamics state? How does this relate to the Earth system? The second law of thermodynamics states that you cannot break even, it is changed from one form to another, it always moves from a more useful form to a less useful form.

Based on the second law of thermodynamics, not all of the energy in a car gets used to move the car forward. What happens to the rest? The rest can be good for air conditioning, and charging your phone.

Using a systems analysis approach (inputs vs. outputs), describe why global warming is occurring. Inputs (greenhouse gases) are absorbing and trapping the heat that is being emitted by the Earth's surface. The output is global warming.

How does negative feedback affect the steady state of a system? What is negative feedback? A negative feedback is self-regulating and stabilizing because the output of the system is used to reduce the input.

Describe the system of the Aral Sea in terms of inputs, outputs, and size. The Aral Sea is a closed system with respect to matter, but it is an open system with respect to energy. The energy it gets from the sun is used to create oxygen.
