# Comparing CP3 and BS 6399: *Part 2* – ‘division by parts’ rule

N. J. Cook, PhD, CEng, FRS, FICE,  
Consulting engineer

## Introduction

In my first feature<sup>1</sup> comparing CP3<sup>2</sup> and BS 6399: Part 2<sup>3</sup> focused on misapplication of the CP3 rules for changes of roughness at the principal reason that BS 6399: Part 2 is universally perceived to give larger loads than CP3. However, there is one change between the two Codes that does tend to increase structural loads and that is the modification of the ‘division by parts’ rule – clause 3.3.2 of CP3 and clause 3.1.3.2 of BS 6399: Part 2.

### The ‘division by parts’ rule in CP3

The rule as drafted, Clause 3.3.2 of CP3, permits the structure to be ‘divided into a number of convenient parts and the wind load on each part calculated, using a factor  $A_z$  that corresponds to the height above ground of the top of that part’ and for the load to be applied at the mid-height of each part. The intent of the original drafters was that ‘convenient parts’ would be interpreted as the major physical components of a structure, e.g. roofs, walls – possibly subdivided down to the storey level, but certainly no finer than that. The use of the term ‘convenient’ is typical of the definitions in CP3, which are frequently imprecise. This is a legacy of the original intent being over during the 8 years it took the draft to pass through its BS2 committee stages, in which lack of precision serves to satisfy both sides of an argument since each side can place its own, different, interpretation on the meaning.

The rule as implemented. As CP3 began to be used, it quickly became clear that many designers were prepared to go much further than the drafters intended, dividing up their structures into many thin horizontal strips to bring as much advantage as possible from the rule. This was justified as being equivalent to the practice of ‘wind-tunnel’ tests in aerodynamic, bridge and chimney design applications, despite it being known that wind theory applied only to three long, thin 2-dimensional structures. As they collected more information from full-scale and model-scale tests, it also became clear to the BS2 committee that the ‘division by parts’ rule was very far from the truth when dealing with typical building shapes. Only 2 years after CP3 was revised, the 1974 Wind Loading Handbook<sup>4</sup> – the BS2 commentary to CP3 – expressed doubts on the use of the rule and strongly advised that it should not be used when calculating building loads.

Consequences to structural loads. If we take the BS2 advice and exclude chadding, we can examine the effect of the rule on structural loads at various levels down a building, bearing in mind that the structure at each level must face the total wind load on all the storeys above. If we take, for an example, a typical storey height, ten divide each building into horizontal strips only 1m

high, we can determine the reduction in overall horizontal shear force and bending moment at the bottom of each storey given by the rule for a range of building heights.

Figs 1 and 2 show the effect of the rule for buildings of three to six storeys in category 2 terrain, expressed as a percentage of the loads obtained for the building taken as a single part. The maximum benefit occurs at the base of a four-storey building; reducing loads to 71% of that of BS6 for moment. The effect on shear is always less than the effect on chord because the moment area forms the upper levels of the building where the effect is smaller. If the wind profile above 12m were to apply down to ground level, the rule would further reduce

loads on buildings less than four storeys, but CP3 modifies the profile below 12m to account for ground surface effects, which prevents this. (The 1974 Wind Loading Handbook gives values of  $A_z$  in 1 m increments to 12m above ground in Table 7-2.3. As buildings get taller, the effect of the rule becomes increasingly less significant.

### Past and current knowledge of wind pressures on buildings

First storey. Although the knowledge of flow around buildings and the wind pressure acting on them was sparse before 1960, when CP3 began to be drafted, it was known that wind speed increased with height above ground because of the effect of friction at the ground surface. The

**Lighting** D.C. Pritchard, 2014-09-25 Lighting now in its sixth edition is the standard text on the principles and practice of lighting interiors and exteriors The book introduces all the main principles of light and colour along with the design of general lighting schemes It complies with the CIBSE lighting code and guides covers the main calculations that a lighting designer needs to do and includes worked examples The book starts with the theory of light and how it is perceived by the eye It looks at the units used and the subjective effect of colour The characteristics of various types of lamp are described along with luminaires the equipment that contains the lamps The effects of daylight on light levels indoors are described before going on to look at the design of general lighting schemes The book concludes with chapters looking at lighting for specific applications including roadway lighting floodlighting and the interior of specific building types

**Access Scaffolding** Stewart Champion, 2014-07-22 Access scaffolding is the most important element of plant for building civil engineering and structural engineering contractors In fact a building or structure cannot be constructed to a height of more than two metres without platforms to work from These platforms have to be constructed on the site in the minimum of time but nevertheless backed up by accurate calculations and design details Access Scaffolding brings together for the first time all the elements of scaffolding providing a comprehensive and unique guide to the best practice in scaffolding its engineering properties and the hazards involved The book covers the very wide varieties of structure which have to be built and used in practice including suspended and completed structures Diagrammatic details of the commonest types are featured Access Scaffolding is a unique and indispensable handbook on the subject for contractor s field and design staff safety inspectors of statutory bodies and structural civil and building consulting engineers It is also a useful resource for students of structural and civil engineering and building degree courses

External Components Michael Mcevoy, 2014-06-03 Analyses in conjunction with Internal Components the performance requirements of building components and the effectiveness of typical solutions External components integrates logically with the theoretical aspects explored in other titles in the Mitchell s building series It encourages evaluation of alternative methods for putting components together

**Surveying for Civil and Mine Engineers** John Walker, Joseph L. Awange, 2017-08-04 Indeed the most important part of engineering work and also of other scientific work is the determination of the method of attacking the problem whatever it may be whether an experimental investigation or a theoretical calculation It is by the choice of a suitable method of attack that intricate problems are reduced to simple phenomena and then easily solved Charles Proteus Steinmetz The structure of this book is to provide a sequence of theory workshops and practical field sessions that mimic a simple survey project designed for civil and mining engineers The

format of the book is based on a number of years of experience gained in presenting the course at undergraduate and post graduate levels The course is designed to guide engineers through survey tasks that the engineering industry feels is necessary for them to have a demonstrated competency in surveying techniques data gathering and reduction and report presentation The course is not designed to make engineers become surveyors It is designed to allow an appreciation of the civil and mine engineering surveyor's job There are many excellent text books available on the subject of engineering surveying but they address the surveyor not the engineer Hopefully this book will distil many parts of the standard text book A lot of the material presented is scattered through very disparate sources and has been gathered into this book to show what techniques lie behind a surveyor's repertoire of observational and computational skills and provide an understanding of the decisions made in terms of the presentation of results The course has been designed to run over about 6 weeks of a semester providing a half unit load which complements a computer aided design CAD based design project
