

BSA M20 MAINTENANCE AND INSTRUCTION MANUAL

TELEMETRIC SYSTEM

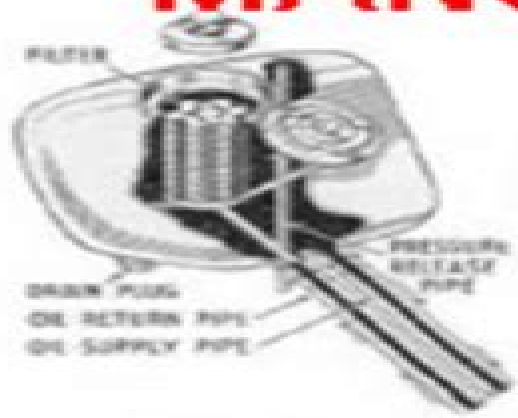

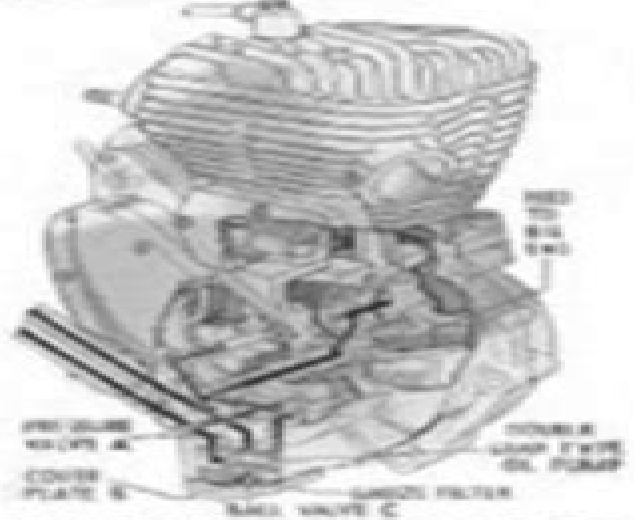

Fig. 1 - Lubrication System

The original lubrication system is of the dry sump type operated by a double gear pump, situated in the bottom of the crankcase on the right-hand side. All oilways are internal except for the supply and return pipes from the tank. The oil flows from the tank to the supply pump (the top gear of gears) and thence past the pressure valve (A) to the foot valve feeding the cam sprocket, and along the bottom member to the big end bearing. After lubricating the big end and returning through the engine in the form of a mist, the oil descends through a filter in the bottom of the crankcase, from which it is drawn by the return pump (the low gear of gears) past the valve (B), and delivered up the return pipe to the tank, where it passes through a fine mesh filter into the tank itself.

Incorrect setting of the ball valve (A), will allow oil to be drawn from the tank to the engine, whilst the machine is stationary. If the ball valve (C) should get stuck in its setting, there will be no return of oil to the tank. To check the oil circulation open the tank filler cap and remove filler cap whilst the engine is running. Oil should be seen rising 4 cm in the return pipe from the crankcase. The tank and crankcase should be drained every 2,000 miles and replenished with clean oil.

Any sediment in the pressure release pipe in the tank, will cause an increase in pressure inside the oil tank, and will result in leakage of oil at the filler cap. This can be got right by making a length of flexible hose into the pipe at the filler cap and just in front of the cap, manipulate it and pushing the hose right up the pipe, thus clearing any obstruction.

To remove the oil tank filler for cleaning, remove the tank filler cap, release the filler by their engagement, and fit filler cap. The filler should be placed in a tin large enough to cover it with petrol, and thoroughly washed. Before replacing make sure that it requires about 2 pints.

The pump filler cap is withdrawn after removing the cover plate (B) and should be thoroughly washed with petrol, dried and replaced.

NOTE. It is not advisable to remove the oil pump unless the pump is the factory type.
