

# AUSTRALIAN MATHEMATICS COMPETITION

AN ACTIVITY OF THE AUSTRALIAN MATHEMATICS TRUST

THURSDAY 6 AUGUST 2009

## MIDDLE PRIMARY DIVISION COMPETITION PAPER

AUSTRALIAN SCHOOL YEARS 3 AND 4  
TIME ALLOWED: 60 MINUTES

### INSTRUCTIONS AND INFORMATION

#### GENERAL

1. Do not open the booklet until told to do so by your teacher.
2. You may use any teaching aids normally available in your classroom, such as MAB blocks, counters, currency, calculators, play money etc. You are allowed to work on scrap paper and teachers may explain the meaning of words in the paper.
3. Diagrams are NOT drawn to scale. They are intended only as aids.
4. There are 25 multiple-choice questions, each with 5 possible answers given and 5 questions that require a whole number answer between 0 and 999. The questions generally get harder as you work through the paper. There is no penalty for an incorrect response.
5. This is a competition not a test; do not expect to answer all questions. You are only competing against your own year in your own State or Region so different years doing the same paper are not compared.
6. Read the instructions on the **Answer Sheet** carefully. Ensure your name, school name and school year are filled in. It is your responsibility that the Answer Sheet is correctly coded.
7. When your teacher gives the signal, begin working on the problems.

#### THE ANSWER SHEET

1. Use only lead pencil.
2. Record your answers on the reverse of the Answer Sheet (not on the question paper) by FULLY colouring the circle matching your answer.
3. Your Answer Sheet will be read by a machine. The machine will see all markings even if they are in the wrong places, so please be careful not to doodle or write anything extra on the Answer Sheet. If you want to change an answer or remove any marks, use a plastic eraser and be sure to remove all marks and smudges.

#### INTEGRITY OF THE COMPETITION

The AMC reserves the right to re-examine students before deciding whether to grant official status to their score.

**Toxoplasma Gondii Host Interactions: A Story of Immune Attack and Parasite Counterattack** Jeroen P. J. Saeij, Eva Frickel, Kirk Jensen, Nicolas Blanchard, 2020-08-10 *Toxoplasma gondii* is an obligate intracellular parasite that can infect all warm blooded animals including an estimated 30% of humans It can cause severe disease in immune suppressed individuals and in fetuses as well as blinding chorioretinitis in adults and children *Toxoplasma* innate immune system interactions determine early parasite control and activation of the adaptive immune system by the host and are therefore critical in determining host survival during the acute phase of infection However induction of an exaggerated inflammatory response can also lead to pathology Only the chronic tissue cyst form of *Toxoplasma* is orally infectious It is therefore critical for the parasite's survival during the chronic phase to escape immune responses at this stage as well *Toxoplasma* exists as genetically divergent strains mostly depending on geography with the most strain diversity being found in South America The key to *Toxoplasma*'s successful co-option of the host are proteins secreted from its rhoptry and dense granule secretory organelles Rhoptry proteins ROPs are secreted into the host cell cytoplasm upon invasion while dense granule proteins GRAs are secreted once the parasite establishes itself in its parasitophorous vacuole PV GRAs can localize to the PV the PV membrane or are secreted beyond the PVM into the host cytoplasm Many ROPs and GRAs are involved in modulating host cell signaling pathways and evasion of host immune responses and play important roles in *Toxoplasma* virulence Polymorphisms in *Toxoplasma*'s ROPs and GRAs likely determine

how well these effectors bind to the divergent substrates in different host species which can explain *Toxoplasma* strain differences in virulence in a particular host species By studying *Toxoplasma* we have not only started to unravel how the parasite modulates immune responses to enhance its survival replication and transmission but we have also learned a lot about the immune system Many unique mechanisms of immunity have indeed been defined using *Toxoplasma* and this parasite has aided our understanding of tissue specific immune responses in the brain and intestine This Research Topic will give a comprehensive overview of *Toxoplasma* host immune response interactions Most *Toxoplasma* virulence determinants to date have been established in murine systems and it is unclear how the parasite interacts with other intermediate hosts and humans In addition the interactions of *Toxoplasma* with some of the most relevant cell types during infection including dendritic cells neurons intestinal epithelial cells or vascular endothelial cells remain poorly understood
