Artificial Immune Systems and Their Applications Dipankar Dasgupta, 2012-12-06 Artificial immune systems are highly distributed systems based on the principles of the natural system This is a new and rapidly growing field offering powerful and robust information processing capabilities for solving complex problems Like artificial neural networks artificial immune systems can learn new information recall previously learned information and perform pattern recognition in a highly decentralized fashion This volume provides an overview of the immune system from the computational viewpoint It discusses computational models of the immune system and their applications and provides a wealth of insights on immunological memory and the effects of viruses in immune response It will be of professional interest to scientists academics vaccine designers and practitioners

Artificial Immune Systems Emma Hart, 2010 Artificial immune systems AIS is a diverse and maturing area of research that bridges the disciplines of immunology and computation The original research impetus in AIS had a clear focus on applying immunological principles to computational problems in practical domains such as computer security data mining and optimization As the field has matured it has diversified such that we now see a growing interest in formalizing the theoretical properties of earlier approaches elaborating underlying relationships between applied computational models and those from theoretical immunology as well a return to the roots of the domain in which the methods of computer science are being applied to immunological modelling problems Following the trends in the field the ICARIS conference intends to provide a forum for all these perspectives The 9th International Conference on AIS ICARIS 2010 built on the success of previous years providing a convenient vantage point for broader reflection as it returned to Edinburgh the venue of the Second ICARIS in 2003 This time the conference was hosted by Edinburgh Napier University at its Craiglockhart Campus recently reopened after extensive refurbishment which has

resulted in a stunning building and state of the art facilities The extent to which the field has matured over the preceding years is clear a substantial track of theoretical research now underpins the discipline The applied stream has expanded in its outlook and has examples of AIS algorithms being applied across a wide spectrum of practical problems ranging from sensor networks to semiconductor design
