Handbook of Service Science, Volume II Paul P. Maglio, Cheryl A. Kieliszewski, James C. Spohrer, Kelly Lyons, Lia Patrício, Yuriko Sawatani, 2018-10-16 The second volume of this successful handbook represents varied perspectives on the fast expanding field of Service Science The novel work collected in these chapters is drawn from both new researchers who have grown up with Service Science as well as established researchers who are adapting their frames for the modern service context The first Handbook of Service Science marked the emergence of Service Science when disciplinary studies of business to customer service systems intertwined to meet the needs of a new era of business to business and global service ecosystems Today the evolving discipline of Service Science involves advanced technologies such as smartphones cloud social platforms big data analytics and artificial intelligence These technologies are reshaping the service landscape transforming both business models and public policy ranging from retail and hospitality to transportation and communications By looking through the eyes of today's new Service Scientists it is anticipated that value and grand challenges will emerge from the integration of theories methods and techniques brought together in the first volume but which are now rooted more deeply in service dominant logic and systems thinking in this second volume The handbook is divided into four parts 1 Service Experience On the Human centered Nature of Service 2 Service Systems On the Nature of Service Interactions 3 Service Ecosystems On the Broad Context of Service 4 Challenges On Rethinking the Theory and Foundations of Service Science The chapters add clarity on how to identify enable and measure service thus allowing for new ideas and connections made to physics design computer science and data science and analytics for advancing service innovation and the welfare of society Handbook of Service Science Volume II offers a thorough reference suitable for a wide reaching audience including researchers practitioners managers and students who aspire to learn about or to create a deeper scientific foundation for service design and engineering service experience and marketing and service management and innovation

Intelligent Computing Kohei Arai, Supriya Kapoor, Rahul Bhatia, 2020-07-03 This book focuses on the core areas of computing and their applications in the real world Presenting papers from the Computing Conference 2020 covers a diverse range of research areas describing various detailed techniques that have been developed and implemented The Computing Conference 2020 which provided a venue for academic and industry practitioners to share new ideas and development experiences attracted a total of 514 submissions from pioneering academic researchers scientists industrial engineers and students from around the globe Following a double blind peer review process 160 papers including 15 poster papers were selected to be included in these proceedings Featuring state of the art intelligent methods and techniques for solving real world problems the book is a valuable resource and will inspire further research and technological improvements in this important area

The Explanatory Autonomy of the Biological Sciences Wei Fang, 2021-12-23 This book argues for the explanatory autonomy of the biological sciences It does so by showing that scientific explanations in the biological

sciences cannot be reduced to explanations in the fundamental sciences such as physics and chemistry and by demonstrating that biological explanations are advanced by models rather than laws of nature To maintain the explanatory autonomy of the biological sciences the author argues against explanatory reductionism and shows that explanation in the biological sciences can be achieved without reduction Then he demonstrates that the biological sciences do not have laws of nature Instead of laws he suggests that biological models usually do the explanatory work To understand how a biological model can explain phenomena in the world the author proposes an inferential account of model explanation The basic idea of this account is that for a model to be explanatory it must answer two kinds of questions counterfactual dependence questions that concern the model itself and hypothetical questions that concern the relationship between the model and its target system The reason a biological model can answer these two kinds of questions is due to the fact that a model is a structure and the holistic relationship between the model and its target warrants the hypothetical inference from the model to its target and thus helps to answer the second kind of question The Explanatory Autonomy of the Biological Sciences will be of interest to researchers and advanced students working in philosophy of science philosophy of biology and metaphysics
