Uncertain Curiosity in Artistic Research, Philosophy, Media and Cultural Studies Lisa Stuckey, Alexander Damianisch, 2025-09-02 This open access edited volume is based on the premise that entanglements between current societal political technological ecological and cultural transformations cannot be sufficiently understood without transforming the modes forms and notions of understanding Conceptually uncertain curiosity is inspired by Helga Nowotny's *Insatiable Curiosity* as it maps trends in the history of knowledge on creative curiosity and its shifting relation to innovation promoting institutions and societal notions of uncertain and unpredictable futures This volume explores epistemic infrastructural and cosmological conditions under which the curiosity drive can flourish Adopting an encyclopedic structure the contributions engage with terminologies that echo transformation processes and conditions of change by foregrounding the ephemeral the processual and the desynchronous and address issues of insurability vagueness and ambiguity This is achieved through a blend of case study research critical terminological work poetic engagement with language and visual culture and discourse analysis through the lenses of artistic research philosophy media and cultural studies

The Future of Museums Gerald Bast, Elias G. Carayannis, David F. J. Campbell, 2018-10-01 This book explores at the macro meso and micro levels and in terms of qualitative as well as quantitative studies the current and future role of museums for art and society Given the dynamic developments in art and society museums need to change in order to remain and in some ways regain relevance This

relevance is in the sense of a power to influence. Additionally, museums have challenges that arise in the production of art through the use of permanent and rapidly changing technologies. This book examines how museums deal with the increasing importance of performance art and social interactive art, artistic disciplines which refuse to use classical or digital artistic media in their artistic processes. The book also observes how museums are adapting in the digital age. It addresses such questions as: How to keep museums in contact with recipients of art in a world in which the patterns of communication and perception have changed dramatically; and also, Can the art museum as a real place be a counterpart in a virtualized and digitalized society, or will museums need to virtualize and even globalize themselves virtually? Chapters also cover topics such as the merits of digital technologies in museums and how visitors perceive these changes and innovations. When you go back to the etymological origin, the Mouseion of Alexandria, it was a place where, supported by the knowledge stored there, art and science were developed, a place of interdisciplinary research and networking as you would call it today. The word from the Ancient Hellenic language for museum means the house of the muses, where the arts and sciences find their berth and cradle. With the Wunderkammer, the museum was re-invented as a place for amazing, for the purpose of representation of dynastic power, followed by the establishment of museums as a demonstration of bourgeois self-consciousness. In the twentieth century, the ideal of the museum as an institution for education received a strong boost, before the museum as a tourism infrastructure became more and more the institutional economic and political role model. This book is interested in discovering what is next for museums and how these developments will affect art and society. Each of the chapters are written by academics in the field but also by curators and directors of major museums and art institutions. **Innovation**

and the Arts Piero Formica, John Edmondson, 2020-02-19. By dwelling on the need for the convergence of business innovation and the arts, this book highlights the value of lowering the psychological, organizational, and institutional barriers that keep them apart. For educators and practitioners, this is an in-depth discussion designed to stimulate awareness of the issues facing business education. The Future of Education and Labor Gerald Bast, Elias G. Carayannis, David F. J.

Campbell, 2019-12-10. This book explores the ways in which education impacts labor markets. Specifically, the contributions in this book indicate that the future of labor is creative, socially aware, and interdisciplinary, while identifying the changes and innovations needed in our educational systems to meet this demand. Due to an increasing automatization, robotic manufacturing, the character of labor and work in general will change dramatically in the near future. This will be the case not only in the western countries but also in the larger emerging economies in Asia, for example China and India. While societal environments, economy, and the character of labor are increasingly in a process of dramatic changes, the educational systems and the leading principles of research about labor and employment are not changing adequately. Cross-disciplinary, inter-disciplinary, and trans-disciplinary thinking and learning is not the main focus of our educational systems. Consequently, the systems of academic research follow and apply disciplinary or even sub-disciplinary strategies, avoiding cross-disciplinary

research approaches and not supporting inter disciplinary academic career models This book introduces such strategic models to better prepare the next generation of workers for the new knowledge economy and the future of democratic societies

Iran Revisited Ali Pirzadeh,2016-04-20 This book examines Modern Iran through an interdisciplinary analysis of its cultural norms history and institutional environment The goal is to underline strengths and weaknesses of Iranian society as a whole and to illustrate less prescriptive explanations for the way Iran is seen through a lens of persistent collective conduct rather than erratic historical occurrences Throughout its history Iran has been subject to many studies all of which have diagnosed the country s problem and prescribed solutions based on certain theoretical grounds This book intends to look inward seeking cultural explanations for Iran s perpetual inability to improve its society The theme in this book is based on the eloquent words of Nasir Khusrau a great Iranian poet *az mast ki bar mast* The words are from a poem describing a self adoring eagle that sees its life abruptly ended by an arrow winged with its own feathers the bird is doomed by its own vanity The closest interpretation of this idiom in Western Christian culture is you reap what you sow which conveys a similar message that underlines one s responsibility in the sense that sooner or later we must face the choices we make This would enable us to confront and live up to what Iran s history and culture have taught us

The Art of Human Rights Romola Adeola,Michael Gyan Nyarko,Adebayo Okeowo,Frans Viljoen,2020-03-24 This book highlights the use of art in human rights specifically within Africa It advances an innovative pattern of thinking that explores the intersection between art and human rights law In recent years art has become an important tool for engagement on several human rights issues In view of its potency and yet potential to be a danger when misused this book seeks to articulate the use of arts in the human rights discourse in its different forms Chapters cover how music photography literature photojournalism soap opera commemorations sculpting and theatre can be used as an expression of human rights This book demonstrates how arts have become a formidable expression of thoughts and a means of articulating reality in a form that simplifies truth and congregates resolve to advance change

Thinking Like a Machine Niki Passath,2017-10-10 In many modes of behavior people act more and more like machines In the context of work people have become a human resource that can be replaced at any time An existence without purpose cannot be imagined just as a machine without function is absurd Do humans already think like machines Do they have a master slave relationship with them Are humans no longer any more than an organic prosthetic fitted to an inorganic body With his created robotic beings Niki Passath breaks with this seemingly rational technological system By eliminating the predominant rationality of the machine he gives it a new meaning This book is the first monograph on the artist s oeuvre Internationally renowned experts shed light on the many facets of his work

Conceptual Joining Lukas Allner,Christoph Kaltenbrunner,Daniela Kröhnert,Philipp Reinsberg,Institute of Architecture at the University of Applied Arts Vienna,Institute of Art Sciences and Art Education at the University of Applied Arts Vienna,2021-11-22 This book explores experimental approaches to the design and construction of wooden structures in

architecture while presenting the results of an artistic research project Through the use of digital tools the anatomy of wood becomes a design determining principle for spatial structures The architects and artists also explore the potential of traditional craftsmanship and derive from this a material oriented practice Structures are not designed here for a specific use but rather open up various usage possibilities due to their unique spatial and geometric properties The documentation provides insight into an open ended research process Guest contributions reflect on the underlying concepts and thus the future relevance of wood as a building material Digitalization, Sustainable Development, and Industry 5.0 Bülent Akkaya, Simona Andreea Apostu, Eglantina Hysa, Mirela Panait, 2023-11-20 Digitalization Sustainable Development and Industry 5.0 offers cutting edge multidisciplinary research with expert insights on the technologies and strategies businesses use in the twin transition process
