thereby allowing developers to build user friendly visualizations that work well on all devices In addition to covering some of the popular techniques and design patterns for building responsive visualizations the book also shows readers how to implement these techniques with the help of some popular tools and libraries *Building Responsive Data Visualizations with D3.js* Merrill Cook,2015 This video course starts out by describing ways in which D3.js fits into existing web standards to provide data visualization solutions that can be easily integrated After working through the basic flow of simple visualizations we'll start adding features tool tips axes and scales We'll take a look at interactivity and transitions Then we'll walk through the use of external data sources including CSV TSV JSON and GeoJSON which will prepare us for more in depth visualizations Further on we'll tackle responsive design covering all the basic concepts and then work our way through a site mockup the old fashioned way looking for breakpoints and using media queries to provide smooth screen size transitions Our work with responsive design will then be applied to a number of our early data visualizations We'll resume our focus on responsive design later in the course when we'll cover using Bootstrap and Pym.js a JavaScript library that enables the embedding of responsive iFrames The data visualizations we'll tackle in the final sections of the course will include mapping with Topo and GeoJSON By the end of this course you will have an armory full of tools to create feature rich data visualizations with D3.js that are responsive on different platforms Resource description page
