Knowledge Management and Information Tools for Building Maintenance and Facility Management Cinzia Talamo, Marcella Bonanomi, 2015-10-29 This book describes the latest methods and tools for the management of information within facility management services and explains how it is possible to collect, organize and use information over the life cycle of a building in order to optimize the integration of these services and improve the efficiency of processes. The coverage includes presentation and analysis of basic concepts, procedures and international standards in the development and management of real estate inventories, building registries and information systems for facility management. Models of strategic management are discussed and the functions and roles of the strategic management center explained. Detailed attention is also devoted to building information modeling (BIM) for facility management and potential interactions between information systems and BIM applications. Criteria for evaluating information system performance are identified and guidelines of value in developing technical specifications for facility management services are proposed. The book will aid clients and facility managers in ensuring that information bases are effectively compiled and used in order to enhance building maintenance and facility management. Enhancing Energy Efficiency and Green Building Design in Section 202 and Section 811 Programs, *Manual of Road Construction and Maintenance* Chatham (England). School of Military Engineering, 1905 **Building Information Modeling** Karen Kensek, 2014-04-16 This is a design guide for architects, engineers and contractors concerning the principles and specific applications of building information modeling (BIM). BIM has the potential to revolutionize the building industry and yet not all architects and construction professionals fully understand what the benefits of BIM are or even the fundamental concepts behind it. As part of the PocketArchitecture Series it includes two parts: fundamentals and applications which provide a comprehensive overview of all the necessary and essential issues. It also includes case studies from a range of project sizes that illustrate the key concepts clearly and use a wide range of visual aids. Building Information Modeling addresses the key role that BIM is playing in shaping the software tools and office processes in the architecture, engineering and construction professions. Primarily aimed at professionals, it is also useful for faculty who wish to incorporate this information into their courses on digital design, BIM and professional practice. As a compact summary of key ideas, it is ideal for anyone implementing BIM. Building Information Modelling (BIM) in Design, Construction and Operations IV J. Casares, A. Galiano Garrigós, 2021-12-29 Containing papers presented at the 4th International Conference on Building Information Modelling (BIM) in Design, Construction and Operations, this volume brings together the research of experts from industry practice and academia. It describes innovative solutions and predictions for future trends across key BIM-related topics. The modern construction industry and built environment disciplines have been transformed through the development of new and innovative BIM tools and techniques. These have fundamentally altered the manner in which construction teams operate, the processes through which designs are evolved and the relationships between

conceptual detail construction and life cycle stages BIM is essentially value creating collaboration throughout the entire life cycle of an asset underpinned by the data attached to them BIM has far and reaching consequences on both building procurement and infrastructure This recent emergence constitutes one of the most exciting developments in the field of the Built Environment These advances have offered project teams multi sensory collaborative tools and opportunities for new communication structures The included papers cover such topics as BIM in design coordination BIM in construction operations BIM in building operation and maintenance BIM and sustainability BIM and collaborative working and practices BIM Facilities management integration BIM GIS integration BIM and automation in construction BIM and health and safety BIM standards BIM and interoperability BIM and life cycle project management BIM and cultural heritage BIM and robotics BIM in risk analysis and management BIM in building cost control BIM and building representation Virtual design and construction VDC BIM in the execution phase BIM for infrastructure development Digital twins
