Environmental Design of

Urban Buildings Mat Santamouris, 2013-06-17 This book provides a review of environmental and energy research with respect to urban building projects. It describes how to overcome related challenges in environmental design of urban buildings. The book discusses the passive and active environmental systems within building concepts. Energy Performance of Residential Buildings Mat Santamouris, 2010-09-23 Energy Rating is a crucial consideration in modern building design affirmed by the new EC Directive on the energy performance of buildings. Energy represents a high percentage of the running costs of a building and has a significant impact on the comfort of the occupants. This book represents detailed information on energy rating of residential buildings covering Theoretical and experimental energy rating techniques reviewing the state of the art and offering guidance on the in situ identification of the UA and gA values of buildings. New experimental protocols to evaluate energy performance detailing a flexible new approach based on actual energy consumption. Data are collected using the Billed Energy Protocol BEP and Monitored Energy Protocol MEP. Energy Normalization techniques describing established methods plus a new Climate Severity Index which offers significant benefits to the user. Also included in this book are audit forms and a CD ROM for applying the new rating methodology. The software prepared in Excel is easy to use, can be widely applied using both deterministic and experimental methods and can be adapted to national peculiarities and energy policy criteria. Energy Performance of Residential Buildings offers full and clear treatment of the key issues and will be an invaluable source of information for energy experts, building engineers, architects, physicists, project managers and local authorities. The book stems from the EC funded SAVE project entitled EUROCLASS. Participating institutes included University of Athens Greece, Belgium Building Research Institute Belgium, University of Seville Spain, Royal Institute of Technology Sweden. **Advances in Passive Cooling** Mat Santamouris, 2012-05-16 Following a rapid increase in the use of air conditioning in buildings of all types, the energy demand for powering such devices has become a significant cause for concern. Passive cooling is increasingly being thought of as the best alternative to air conditioning. This book offers the latest knowledge and techniques on passive cooling, enabling building professionals to understand the state of the art and employ relevant new strategies. With separate chapters on comfort, urban microclimate, solar control, ventilation, ground cooling and evaporative and radiative cooling, this authoritative text will also be invaluable for architects, engineers and students working on building physics and low energy design. Advances in Passive Cooling is part of the BEST series edited by Mat Santamouris. The aim of the series is to present the most current high quality theoretical and application oriented material in the field of solar energy and energy efficient buildings.
