CHAPTER 6

6.2-1. Consider the closed-loop system of Fig. P6.2-1.

Figure P6.2-1 System for Problem 6.2-1.

- Calculate and plot the unit-step response at the sampling instants, for the case that $D(z) = 1$.
- Calculate the system unit-step response of the analog system, that is, with the sampler, digital controller, and data hold removed. Plot the response on the same graph with the results of part (a).
- For the system of Fig. P6.2-1, let $D(z) = 1$ and $T = 0.4$ s. Calculate the unit-step response and plot these results on the same graph used for parts (a) and (b).
- Use the system dc gains to calculate the steady-state responses for each of the systems of parts (a), (b), and (c). Why are these gains equal?

Solution:

$$(a) \quad G(z) = \left. \frac{z-1}{z} \right| \left[\frac{0.5}{s(s+0.5)} \right] = \frac{z-1}{z} \frac{(1-e^{-1})}{(z-1)(z-e^{-1})} = \frac{0.6321}{z-0.3679}$$

$$\frac{G(z)}{1+G(z)} = \frac{0.6321}{z-0.2642}$$

$$\frac{C(z)}{z} = \frac{0.6321}{z-0.2642} = \frac{0.5}{z-0.2642} + \frac{-0.5}{z-0.2642}$$

Parallel Computing in Optimization A. Migdalas, Panos M. Pardalos, Sverre Storøy, 2013-12-01 During the last three decades breakthroughs in computer technology have made a tremendous impact on optimization In particular parallel computing has made it possible to solve larger and computationally more difficult problems This volume contains mainly lecture notes from a Nordic Summer School held at the Linköping Institute of Technology Sweden in August 1995 In order to make the book more complete a few authors were invited to contribute chapters that were not part of the course on this first occasion The purpose of this Nordic course in advanced studies was three fold One goal was to introduce the students to the new achievements in a new and very active field bring them close to world leading researchers and strengthen their competence in an area with internationally explosive rate of growth A second goal was to strengthen the bonds between students from different Nordic countries and to encourage collaboration and joint research ventures over the borders In this respect the course built further on the achievements of the Nordic Network in Mathematical Programming which has been running during the last three years with the support of the Nordic Council for Advanced Studies NorFA The final goal was to produce literature on the particular subject which would be available to both the participating students and to the students of the next generation

Internal Migration in the Countries of Asia Martin Bell, Aude Bernard, Elin Charles-Edwards, Yu Zhu, 2020-07-20
This book explores how population mobility varies among the countries of Asia. While much attention has been given to international migration, movement within countries is numerically much more significant. Coupling innovative methods developed in the global IMAGE project with the contextual knowledge of experts on 15 Asian countries, the book measures and explains how people across Asia differ in the probability of changing residence, the ages at which they move, and the impact of these migrations on the distribution of human settlement within each country. It demonstrates how stage of economic development, coupled with historical events, local contingencies, cultural norms, political frameworks, and the physical environment shape human migration. By using rigorous statistics in a robust comparative framework, this book provides a clear understanding of contemporary migration in Asia for students and academics and a valuable resource for policy makers and planners in Asia and beyond.
