Build Your Own Lisp:

Build Your Own Lisp Daniel Holden, 2014-10-22 If you've ever wondered how to build your own programming language or wanted to learn C but weren't sure where to start this is the book for you In under 1000 lines of code you'll start building your very own programming language and in doing so learn how to program in C one of the world's most important programming languages Along the way we'll learn about the weird and wonderful nature of Lisps the unique techniques behind function programming the methods used to concisely solve problems and the art of writing beautiful code *Build Your Own Lisp* is a fun and creative journey through a fascinating area of computer science and an essential read for any programmer new or old

Build Your Own Programming Language Clinton L. Jeffery, 2021-12-31 Written by the creator of the Unicon programming language this book will show you how to implement programming languages to reduce the time and cost of creating applications for new or specialized areas of computing Key Features Reduce development time and solve pain points in your application domain by building a custom programming language Learn how to create parsers code generators file readers analyzers and interpreters Create an alternative to frameworks and libraries to solve domain specific problems Book Description The need for different types of computer languages is growing rapidly and developers prefer creating domain specific languages for solving specific application domain problems Building your own programming language has its advantages It can be your antidote to the ever increasing size and complexity of software In this book you'll start with implementing the frontend of a compiler for your language including a lexical analyzer and parser The book covers a series of traversals of syntax trees culminating with code generation for a bytecode virtual machine Moving ahead you'll learn how domain specific language features are often best represented by operators and functions that are built into the language rather than library functions We'll conclude with how to implement garbage collection including reference counting and mark and sweep garbage collection Throughout the book Dr Jeffery weaves in his experience of building the Unicon programming language to give better context to the concepts where relevant examples are provided in both Unicon and Java so that you can follow the code of your choice of either a very high level language with advanced features or a mainstream language By the end of this book you'll be able to build and deploy your own domain specific languages capable of compiling and running programs What you will learn Perform requirements analysis for the new language and design language syntax and semantics Write lexical and context free grammar rules for common expressions and control structures Develop a scanner that reads source code and generate a parser that checks syntax Build key data structures in a compiler and use your compiler to build a syntax coloring code editor Implement a bytecode interpreter and run bytecode generated by your compiler Write tree traversals that insert information into the syntax tree Implement garbage collection in your language Who this book is for This book is for software developers interested in the idea of inventing their own language or developing a domain specific language Computer science students taking compiler construction courses will also find this book highly

useful as a practical guide to language implementation to supplement more theoretical textbooks Intermediate level knowledge and experience working with a high level language such as Java or the C language are expected to help you get the most out of this book

Build your own Future David Seabury,2022-03-29 As long as we live the future is coming to pass There it is a promise or a specter To one man it brings joy and the realization of his dreams to another tragedy All your life you have seen such futures happening Years ago some intimate of yours gave evidence of splendid possibilities Now he is a broken man sick and discredited An acquaintance you believed had little promise is wealthy and revered How did it happen No question is more important than this none upon which you and I need more light Here we are working at our tasks trying to save a little money giving what love we have to our intimates and hoping always hoping for a better tomorrow But suppose we are working saving struggling to no avail We need to do something about tomorrow NOW What if we discover years from now that ignorance of certain laws and the neglect of important methods compromised our efforts and left us disappointed That is our fear You can t build the future in the future You can only plan for it by constructive programs and positive actions today There is now something for you to take and something for you to give Your giving may be only a courteous attention to another man s ideas but that is something in fact much When this act of giving and taking is wisely repeated you learn not only that you can produce a constantly unfolding life but how which is to some point We must be ready to meet the ever changing scene Surely this has always been true Does not the art of planning one s future begin with alert interest in how to overcome the obstacles of today Tomorrow is new New ways are necessary in the now if we are to be ready for the time to come Suppose instead of living in this century you were a primitive man trying to lift a massive stone tearing your bleeding fingers Suppose someone came along with a crowbar crying Here I ve a lever I ll pry the rock out for you What would you do go on tugging or stand back and let him use his bar If you saw him accomplish the task with ease would you let the man go away leaving you to struggle with other rocks or would you ask him how such levers work Suppose that then after you had learned all about this easier way of moving rocks you discovered this stranger used other methods new to you He could move things around on what he called wheels He knew how to harness a waterfall and make it work for you He could hollow out a log so that in it you could travel with ease on the water Wouldn t you become a little excited and want to find out more of what he knew I have been excited a good many years now over what seems to me a most amazing fact The discovery of how to control matter to make physical life easier came to mankind slowly Insight into how a like transformation may take place in a man s handling of his own life has come in one generation Most people are not yet aware of it Few realize what has been

happening for millions are toiling greedily and fighting bitterly everywhere They know that science and mechanics have made over the face of the earth They do not know that psychology and its sister sciences are making a like change for man s handling of his own nature
