Sensor Wiring

Route the sensor wire up the fork blade, using cable ties to secure it at the bottom and top. Wire must not hang loosely, but must have enough slack to allow the front wheel and handle bars to turn without putting too much tension on the sensor wire. Too much tension could loosen the wire from the computer and interrupt input to the computer.

However, be certain that there is not too much slack and that the wire does not interfere with free movement or spinning of the front wheel. Route the remaining wire around the front brake cable and the handlebar. Excess wire should be carefully looped and secured to the stem with a cable tie.
