Dombrowski, Karen L. Gischlar, Martin Mrazik, 2011-07-08 During the past several decades interest in children's psychological disorders has grown steadily within the research community resulting in a burgeoning knowledge base. The majority of the attention and funding not surprisingly has focused on the more prevalent and well known conditions. Although this raises the odds that young people with more well known disorders such as ADHD, autism, and learning disorders will receive much needed professional assessment and intervention, children with less frequently encountered disorders may experience a higher risk of misdiagnosis and inappropriate treatment. Useful data has been scattered throughout the literature for severe but less frequent childhood psychological disorders including fire setting, gender identity disorder, impulse control disorders, i.e. kleptomania, trichotillomania, intermittent explosive disorder, selective mutism, Munchausen by proxy, childhood schizophrenia, gang involvement, sexual offending, self-injurious behavior, and feral children. This concise volume offers up-to-date information on these conditions which though relatively rare may have profound effect not only on the children themselves but also their families, friends, and the community at large. Coverage of each disorder is presented in an accessible format covering Overview and history, Description and diagnostic classification with proposed changes to the DSM V, Etiology and theory, Assessment tools and interview protocols, Commonly used psychological and pharmacological treatment options, Current research issues, and directions for future investigation. *Assessing and Treating Low Incidence High Severity Psychological Disorders of Childhood* is a must-have reference for researchers, clinicians, practitioners, and graduate students in clinical child and school psychology, pediatrics, psychiatry, social work, school counseling, education, and public policy.

*Psychoeducational Assessment and Report Writing* Stefan C. Dombrowski, 2014-11-10 This textbook provides in-depth instruction for conducting psychoeducational assessments of children in grades K-12 and conveying results through detailed, well-written reports. It takes readers step by step through the assessment process: collecting data, writing reports, and communicating conclusions for students with conditions spanning the range of IDEA classifications such as autism, learning disabilities, emotional disturbances, and conditions covered by Section 504. The book offers not only a broad understanding of assessment and communication skills but also of the ethical, legal, cultural, and professional considerations that come with psychoeducational evaluation. And its sample reports model clear, well-organized results accessible to parents and caregivers as well as teachers and colleagues. Key areas of coverage include: Assessment basics, the testing environment, and protocols; interviewing and observation; Report writing section by section from reason for referral to summary and recommendations; Guidelines for oral reporting with case examples; Special issues in psychoeducational assessment and report writing; Sample psychoeducational reports using this framework. *Psychoeducational Assessment and Report Writing* is an essential text for graduate students, researchers, professors, and professionals in child and school psychology, assessment, testing, and evaluation.

**Essentials of Sociology** George Ritzer, 2019-11-08 Show students the relevance of sociology to their lives Adapted from Ritzer's Introduction to Sociology this text provides students with a rock solid foundation in a shorter and more streamlined format      Age and the Reach of Sociological Imagination Dale Dannefer, 2021-08-09 The dominant narratives of both science and popular culture typically define aging and human development as self contained individual matters failing to recognize the degree to which they are shaped by experiential and contextual contingencies Our understandings of age are thereby boxed in and constricted by assumptions of normality and naturalness that limit our capacities to explore possible alternative experiences of development and aging and the conditions both individual and social that might foster such experiences Combining foundational principles of critical social science with recent breakthroughs in research across disciplines ranging

from biology to economics this book offers a scientifically and humanly expanded landscape for apprehending the life course Rejecting familiar but false dichotomies such as nature vs nurture and structure vs agency it clarifies the organismic fundamentals that make the actual content of experience so centrally important in age and development and it also explores why attention to these fundamentals has been so resisted in studies of individuals and individual change and in policy and practice as well In presenting the basic principles and reviewing the current state of knowledge Dale Dannefer introduces multi levelled social processes that shape human development and aging over the life course and age as a cultural phenomenon organizing his approach around three key frontiers of inquiry that each invite a vigorous exercise of sociological imagination the Social Structural Frontier the Biosocial Frontier and the Critical Reflexive Frontier

**The Good Life and the Good State** Katharina Nieswandt,2025-01-14 There is no good human life outside of a state and the good state enables us to live well together so says Constitutivism the theory developed in this book Reinvigorating Aristotelian ideas the author asks in what sense citizens of modern populous and pluralistic societies share a common good While we can easily find examples of cooperation that benefit each member such as insurances the idea that persons could share a common good became puzzling with modernity a puzzlement epitomised in Margaret Thatcher s What is society There is no such thing This puzzlement the author argues results from our profoundly modern understanding of rational actions which we see as means toward outcomes If we allow that not only outcomes but also histories and identities can be good reasons for actions then it makes sense to see a person s good and the common good of their political community as constitutive of one another as Aristotle thought Building on this idea the author argues that in designing our institutions we also give ourselves an identity in other words we constitute ourselves as persons

*Societies Past and Present* Thomas C. Burr,2025-09-24 This global and comparative history examines the evolution of human societies over many millennia illuminating patterns within societies today It shows how the original human groups bands of hunter gatherers grew over time into larger and more complex societies through three major transformations settlement and domestication the development of complexity and inequality and industrial globalization The book describes how each of these major changes in economy and political structure created new types of societies villages chiefdoms and other complex societies agrarian states and empires and today s global social system It therefore shows how different types of societies came to co exist and interact on Earth The book compares societies along seven aspects their economies political systems cultural patterns inequalities family structures demographics and environmental patterns It shows that even societies that shared similar basic features still exhibited great variety The comparative framework presented here helps readers develop a conceptual vocabulary for understanding societies the larger social systems within which they exist and the major social changes that led to this continuing expansion
