

The background of the book cover is a photograph of a desert town under attack. In the foreground, there are several low-rise buildings with flat roofs, some painted in light blue and yellow. A dirt road winds through the town. In the middle ground, a large, billowing cloud of orange and brown smoke and dust rises from the town, indicating a recent explosion or fire. The sky is a clear, pale blue.

Kopp, 2013-10-08 Assessing natural resource damages often requires the use of nonmarket valuation techniques that were developed for use in benefit cost analyses Natural resource damage assessment dramatically changes the context for applying them Two aspects of this context are especially important First damages are to be measured by the monetary value of the losses people experience including their use and nonuse values because of injuries to natural resources a process requiring careful delineation of how the injuries connect to the resource's services Second a single identified entry not generalized anonymous taxpayers must pay damages based on what is measured and evaluations of the measurement techniques take place not in agency meeting rooms but in courtrooms Contributors to *Valuing Natural Assets* examine the ways in which requirements for damage assessment change how the measures are used presented received and defended Drawing upon their personal involvement with the process and the research issues it has raised both in providing analysis for defendants or plaintiffs in damage assessment cases and in writing for academic journals their chapters reflect individual research programs that temper the rigorous demands of scholarship with the equally demanding standards of litigation
