

Adapting to the Impacts of Climate Change

Adapting To The Impacts Of Climate Change Americas Climate Choices

**National Research Council (U.S.).
Pannel on Adapting to the Impacts of
Climate Change**

Adapting To The Impacts Of Climate Change Americas Climate Choices:

Adapting to the Impacts of Climate Change, 2010 This report presents the findings of the Committee on Adapting to the Impacts of Climate Change one of four concurrent panel efforts within the America's Climate Choices Committee study Page ix Adapting to the Impacts of Climate Change, 2010 Adapting to the Impacts of Climate Change National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, America's Climate Choices: Panel on Adapting to the Impacts of Climate Change, 2011-01-06 Across the United States impacts of climate change are already evident Heat waves have become more frequent and intense cold extremes have become less frequent and patterns of rainfall are likely changing The proportion of precipitation that falls as rain rather than snow has increased across the western United States and Arctic sea ice has been reduced significantly Sea level has been rising faster than at any time in recent history threatening the natural and built environments on the coasts Even if emissions of greenhouse gases were substantially reduced now climate change and its resulting impacts would continue for some time to come To date decisions related to the management and protection of the nation's people resources and infrastructure have been based on records in the recent past when climate was relatively stable Adapting to the Impacts of Climate Change part of the congressionally requested America's Climate Choices suite of studies calls for a new paradigm one that considers a range of possible future climate conditions and impacts that may be well outside the realm of past experience Adaptation requires actions from many decision makers in federal state tribal and local governments the private sector non governmental organizations and community groups However current efforts are hampered by a lack of solid information about the benefits costs and effectiveness of various adaptation options climate information on regional and local scales and a lack of coordination Adapting to the Impacts of Climate Change calls for a national adaptation strategy that provides needed technical and scientific resources incentives to begin adaptation planning guidance across jurisdictions shared lessons learned and support of scientific research to expand knowledge of impacts and adaptation America's Climate Choices National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on America's Climate Choices, 2011-06-11 Climate change is occurring It is very likely caused by the emission of greenhouse gases from human activities and poses significant risks for a range of human and natural systems And these emissions continue to increase which will result in further change and greater risks America's Climate Choices makes the case that the environmental economic and humanitarian risks posed by climate change indicate a pressing need for substantial action now to limit the magnitude of climate change and to prepare for adapting to its impacts Although there is some uncertainty about future risk acting now will reduce the risks posed by climate change and the pressure to make larger more rapid and potentially more expensive reductions later Most actions taken to reduce vulnerability to climate change impacts are common sense investments that will offer protection against natural climate variations and extreme events In addition crucial investment

decisions made now about equipment and infrastructure can lock in commitments to greenhouse gas emissions for decades to come. Finally, while it may be possible to scale back or reverse many responses to climate change, it is difficult or impossible to undo climate change once manifested. Current efforts of local state and private sector actors are important but not likely to yield progress comparable to what could be achieved with the addition of strong federal policies that establish coherent national goals and incentives and that promote strong U.S. engagement in international level response efforts. The inherent complexities and uncertainties of climate change are best met by applying an iterative risk management framework and making efforts to significantly reduce greenhouse gas emissions, prepare for adapting to impacts, invest in scientific research, technology development and information systems, and facilitate engagement between scientific and technical experts and the many types of stakeholders making America's climate choices.

Adapting to the Impacts of Climate Change National Research Council (U.S.). Panel on Adapting to the Impacts of Climate Change, 2010. [Our Warming Planet: Climate Change Impacts And Adaptation](#) Martin Parry, Cynthia Rosenzweig, Manishka De Mel, 2021-10-22. This volume, the second in the Lectures in Climate Change series, covers the full array of climate impacts and adaptation measures. It has been brought together by friends and colleagues of Dr. Martin Parry, Co-Chair of the Intergovernmental Panel on Climate Change (IPCC) 2007 assessment on impacts and adaptation. The writers are experts in this field and have been lead authors in many of the IPCC assessments and other major publications. Lectures in Climate Change is a unique combination of written text plus electronic slides that together comprise an informative and up-to-date set of presentations. This second volume, entitled *Our Warming Planet: Climate Change Impacts and Adaptation*, covers areas of climate impacts related to climate science, methods and approaches, sectors, regional and national studies, and policy and practice. The volume comprises topics such as current and future challenges of climate change, global assessments, downscaling, community-based adaptation, impacts on biodiversity, food systems, water resources, and cities. Research from across the world is presented on making science actionable through assessments, early warning, and early action; communicating climate risk; documenting the uptake of adaptation on the global front; and transformation towards systemic resilience. Included with this publication are downloadable electronic slides and accompanying notes of each lecture for students, teachers, and public speakers around the world to be better able to understand and present climate change impacts and adaptation. Related Links: *America's Climate Choices*, 2010. Convened by the National Research Council in response to a request from Congress, *America's Climate Choices* is a suite of five coordinated activities designed to study the serious and sweeping issues associated with global climate change, including the science and technology challenges involved, and provide advice on the most effective steps and the most promising strategies that can be taken to respond. The Panel on Adapting to the Impacts of Climate Change was charged to describe, analyze, and assess actions and strategies to reduce vulnerability, increase adaptive capacity, improve resilience, and promote successful adaptation to climate change in different regions, sectors, systems, and populations. This

report draws on a wide range of sources and case studies to identify lessons learned from past experiences promising current approaches and potential new directions
