Fig. 6—View of 270 pressure-volume tester assembly for checking power steering system on 190 and 190XT models. Open end of "tee" fitting must be capped before engine is started.

fitting. Connect a pressure-volume tester inlet hose to steering system return hose as shown. Position outlet hose from tester in the "Power-Director" filter opening so that oil will be returned to the reservoir. Make certain that "Power-Director" control lever is in neutral and gas control is in neutral (not brake position). Start engine and adjust speed to 1800 rpm. Close valve on tester until pressure is 2200 psi and allow oil temperature to reach 120 degrees F.

Close the valve on tester completely and check pressure gage. If relief pressure is not 1200 psi, remove plug (A)—Fig. 6(A) and add or deduct oil (B) to set pressure.

Fig. 7—View of 270 pressure-volume tester assembly for checking power steering system on 190 and 190XT models. It is necessary to bring return reservoir valve (A) and close the hose slightly so that test hose is held in its attached. Make certain that upper end of hose is tight and that "tee" fitting is capped before instrument is started. Relief valve (B) located between the two "tee" fittings.

To check volume, open the valve on tester until pressure is approximately 2200 psi and observe the volume of flow. With engine operating at 1800 rpm, volume should be 5.25 gpm. If volume of flow is incorrect, the flow control valve (A) or pump should be serviced as outlined in paragraph 13B.

180 and 185 Models

13A. The "Power-Director" clutch and (on models as equipped) the gas clutch are actuated by pressure from the power steering system. Before checking the power steering relief pressure, refer to paragraphs 95 and 127 to check the "Power-Director" and gas pressure.

A pressure and volume flow test of the power steering system will disclose whether the pump or relief valve is malfunctioning. To make such a test, proceed as follows:

Remove cover from below instrument panel and disconnect steering system return tube from "tee" fitting shown in Fig. 7. Install a cap over open end of "tee" fitting. Connect a pressure-volume tester inlet hose to steering system return hose as shown. Position outlet hose from tester in the bypass fitting filter opening so that oil will be returned to hydraulic reservoir. Start the engine and adjust speed to rated rpm (2000 rpm on 180 models; 1800 rpm on 185 models). Close valve on tester until pressure is 2200 psi and allow oil temperature to reach 120-125 degrees F.

Close the valve on tester completely and check pressure gage. If relief pressure is not 1200-1800 psi, remove and disassemble the relief valve (Fig. 7). Add or deduct oil (B)—Fig. 7(A) to set pressure. Addition of one pint
