## **Assessing Chronic Disease Management European:**

**Assessing Chronic Disease Management in European Health Systems** Who Regional Office for Europe, 2015-06-09 This book systematically examines experiences of 12 countries in Europe using an explicit comparative approach and a unified framework for assessment to better understand the diverse range of contexts in which new approaches to chronic care are being implemented and to evaluate the outcomes of these initiatives The study focuses in on the content of these new models which are frequently applied from different disciplinary and professional perspectives and associated with different goals and does so through analyzing approaches to self management support service delivery design and decision support strategies financing availability and access Significantly it also illustrates the challenges faced by individual patients as they pass through the system *Assessing Chronic Disease Management in European Health Systems* World Health Organization, 2015-12-16 This publication explores some of the key issues ranging from interpreting the evidence base to assessing the policy context for and approaches to chronic disease management across Europe Drawing on 12 detailed country reports available in a second online volume the study provides insights into the range of care models and the people involved in delivering these payment mechanisms and service user access and challenges faced by countries in the implementation and evaluation of these novel approaches **Handbook Integrated Care** Volker Amelung, Viktoria Stein, Esther Suter, Nicholas Goodwin, Ellen Nolte, Ran Balicer, 2021-07-12 This handbook shares profound insights into the main principles and concepts of integrated care It offers a multi disciplinary perspective with a focus on patient orientation efficiency and quality by applying widely recognized management approaches to the field of healthcare The handbook also highlights international best practices and shows how integrated care can work in various health systems In the majority of health systems around the world the delivery of healthcare and social care is characterised by fragmentation and complexity Consequently much of the recent international discussion in the fields of health policy and health management has focused on the topic of integrated care Integrated acknowledges the complexity of patients needs and aims to meet them by taking into account both health and social care aspects Changing and improving processes in a coordinated way is at the heart of this approach The second edition offers new chapters on people centredness complexity theories and evaluation methods additional management tools and a wealth of experiences from different countries and localities It is essential reading both for health policymakers seeking inspiration for legislation and for practitioners involved in the management of public health services who want to learn from good practice *Toolkit for developing a multisectoral action plan for noncommunicable diseases. Module 5. Evaluating the implementation of a multisectoral action plan*, 2022-04-14 *The Changing Role of the Hospital in European Health Systems* Martin McKee, Sherry Merkur, Nigel Edwards, Ellen Nolte, 2020-08-13 A team of world leading policy experts and clinicians analyse the changing role of the hospital across Europe OECD Health Policy Studies Better Ways to Pay for Health Care OECD, 2016-06-29 This report looks at payment reform one of many policy tools being

used to improve health system performance      Global Perspectives on Health Assessments for an Aging Population Ribeiro, Luis Vieira, Ribeiro, Anabela Magalhães, 2023-04-03 Today's society recognizes that the last decades of an individual's life are usually those in which health tends to deteriorate and chronic pathologies increase. Action at this level is verified through the increased concern of government officials with the elderly population motivated by the socio-economic impact of costs associated with the provision of healthcare in this group. *Global Perspectives on Health Assessments for an Aging Population* provides relevant theoretical frameworks and the latest empirical research findings in the area of health assessments for an aging population. Covering topics such as ambulatory wellbeing, gerontology and neuropsychological assessment, this premier reference source is a valuable resource for gerontological healthcare professionals, gerontological social workers, psychologists, students and educators of higher education, researchers and academicians.

*COPD - Pathology, Diagnosis, Treatment, and Future Directions* Steven Jones, 2024-06-05 Chronic obstructive pulmonary disease is a currently incurable and irreversible lung condition with worldwide mortality rates similar to stroke, diabetes and Alzheimer's disease. Treatments are limited to the removal of the underlying causes, e.g. exposure to smoke, easing some of the symptoms and slowing the rate at which the disease worsens. As a consequence of smoking, it is less well known than lung cancer, even though it has an equal or higher mortality rate. It is a combination of diseases that affects bronchioles and alveoli to different extents from patient to patient. An accurate diagnosis of each patient's physiology is potentially useful in tailoring treatment to the underlying physiology. This book provides an overview of the underlying pathology of the disease. It then discusses some of the clinical tools available to obtain pathology-specific diagnosis for a given patient. A section then discusses the consequences of the disease. While some of these consequences are readily expected from a cursory understanding of the disease, anemia and shortness of breath, others are less obvious: muscle atrophy, impaired balance and cardiac problems. In the final sections, disease treatment is addressed. The book is intended to convey two important points. The first is that hope exists for more effective treatments in the future, while the second is that these treatments will require strong collaborations among researchers in a variety of disciplines.

*Achieving Person-Centred Health Systems* Ellen Nolte, Sherry Merkur, Anders Anell, 2020-08-06 The idea of person-centred health systems is widely advocated in political and policy declarations to better address health system challenges. A person-centred approach is advocated on political, ethical and instrumental grounds and believed to benefit service users, health professionals and the health system more broadly. However, there is continuing debate about the strategies that are available and effective to promote and implement person-centred approaches. This book brings together the world's leading experts in the field to present the evidence base and analyse current challenges and issues. It examines person-centredness from the different roles people take in health systems as individual service users, care managers, taxpayers or active citizens. The evidence presented will not only provide invaluable policy advice to practitioners and policymakers working on the design and implementation of person-centred health systems but will also be an excellent

resource for academics and graduate students researching health systems in Europe This title is available as Open Access on Cambridge Core     Tackling Chronic Disease in Europe Reinhard Busse, 2010 Strategic discussed in the second part of this volume include 1 prevention and early detection 2 new provider qualifications e g nurse practitioners and settings 3 disease management programmes and 4 integrated care models But choosing the right strategies will be difficult particularly given the limited evidence on effectiveness and cost effectiveness
