Astronomy Communication Andre Heck, C. Madsen, 2013-03-14

Astronomy has always been one of the easiest of the sciences to convey to the public That is partly because it produces spectacular pictures that can be explained at least in part and admired partly because understanding of astronomy usually does not depend upon a knowledge of a complex classification system or esoteric terminology and partly because its extremes in distances and times challenge our imagination and philosophies Most scientists enjoy sharing with others the discoveries made by themselves and their colleagues The primary purpose of scientific research is to discover to learn and to understand When we succeed we enjoy sharing that understanding Education is most pleasurable when our audience wishes to learn and we have something important to convey A field that does not communicate effectively with the public soon loses its interest and support Author Andre Heck explains the many different ways in which professional communication now occurs while Leslie Sage explains how such communication should be done Astronomy done with spacecraft and large equipment is very expensive and the funds for those ultimately come from the public The cost of astronomy prorated over the number of research astronomers is perhaps the highest in all the sciences If astronomers do not share their results with the public they will lose its support However for most astronomers the desire to share and educate dominates over the pragmatic need to win public support With the advent of new communication techniques television videos CDs DVDs animation simulations we have new methods to communicate in addition to the conventional ones of the printed and spoken word *Trademark Manual of Examining Procedure (TMEP)*.
