Power BI DAX Simplified Reza Rad, 2021-07-18 DAX is the language of data analysis in Microsoft Power BI Azure Analysis Services and Excel Power Pivot DAX is a powerful language that can quickly empower you to analyze year-over-year or rolling 12 months calculations It is rare to find an analytics solution using Microsoft technologies especially Power BI that doesn't require some calculations to be written by DAX As a Power BI or Microsoft BI developer it is essential to learn this language and master it Learning a language is not just learning the structure and functions It is learning how, where, and when to use it so that you can solve real-world problems with it In my training and consulting experience on Power BI I realized that DAX is the weak point for many Power BI users DAX itself is not a complex language It is merely a language of expression The complexity of learning DAX is not the formula or the functions It is how to use it in real-world scenarios and how it performs on a dataset or visual I have been writing many blogs about DAX for many years My blog articles are all coming from my experience working with Power BI I found it helpful to compile them all in a book Because my blog articles practically explain things I thought it better to title it as a practical way of learning DAX by examples Indeed there are books, articles, and Microsoft documentation on how each

function works where and how However learning these through an example would bring a new way of understanding it A good analytics solution is a combined outcome of a good data model good data preparation and good analytics and calculations I have written another book about the Basics of modeling in Power BI This book is covering the calculation and DAX aspects of it This book is for you if you are building a Power BI solution Even if you are just visualizing the data calculations are an essential part of analytics You do need to have the calculation ready before visualizing it This is not a book to explain every single function in DAX The approach in this book is to have practical examples Every chapter is based on real world examples of using a combination of functions to solve a challenge You can start from any chapter and finish at any chapter The order of chapters suggested in this book is just a guideline to help you have a smooth flow of topics Each chapter can be read without needing other chapters Examples of this book are designed in a way that you can use the learning straight away in your Power BI file

Supercharge Power BI Matt Allington,2021-04-01 Data analysis expressions DAX is the formula language of Power BI Learning the DAX language is key to empower Power BI users so they can take advantage of these new Business Intelligence BI capabilities This volume clearly explains the concepts of DAX while at the same time offering hands on practice to engage the reader and help new knowledge stick This third edition has been updated for the new Power BI Ribbon interface while still providing a bridge for readers wanting to learn DAX in the Power BI Power Pivot or Excel

Learn to Write DAX Matt Allington,2015-12 Active learning lessons for mastering DAX Data analysis expressions DAX is the formula language of PowerPivot and this book is written to give hands on practice to anyone who wants to become competent at writing such formulas Sample exercises that explain each concept are provided and followed by practice questions and answers to maximize learning and experience with DAX
