The Oxford Handbook of Agricultural History Jeannie M. Whayne, 2024 Agricultural history has enjoyed a rebirth in recent years in part because the agricultural enterprise promotes economic and cultural connections in an era that has become ever more globally focused but also because of agriculture s potential to lead to conflicts over precious resources The Oxford Handbook of Agricultural History reflects this rebirth and examines the wide reaching implications of agricultural issues featuring essays that touch on the green revolution the development of the Atlantic slave plantation the agricultural impact of the American Civil War the rise of scientific and corporate agriculture and modern exploitation of agricultural labor

Evolution and Domestication Moshe Feldman, Avraham A. Levy, 2023-10-03 This open access book covers a century of research on wheat genetics and evolution starting with the discovery in 1918 of the accurate number of chromosomes in wheat. We re-evaluate classical studies that are pillars of the current knowledge considering recent genomic data in the wheat group comprising 31 species from the genera *Amblyopyrum*, *Aegilops*, *Triticum* and other more distant relatives. For these species we describe morphology, ecogeographical distribution, phylogeny as well as cytogenetic and genomic features. For crops we also address evolution under human selection, namely pre-domestication cultivation and domestication. We re-examine the genetic and archeological evidence of where, when and how domestication occurred. We discuss unique aspects of genome evolution and maintenance under polyploidization in natural and synthetic allopolyploids of the wheat group. Finally, we propose some thoughts on the future prospects of wheat improvement. As such, it can be of great interest to wheat researchers and breeders as well as to plant scientists and students interested in plant genetics, evolution, domestication and polyploidy.

Development and Molecular Cytogenetic Characterization of Alien Introgressions Conferring Resistance to Hessian Fly and Fusarium Head Blight in Wheat Ronell Joey Carcallas Cainong, 2014 Hexaploid wheat (*Triticum aestivum* L. 2n = 6x = 42 AABBDD) is a recent polyploid and originates from a limited number of founder genotypes. Domestication bottlenecks further reduced genetic diversity. The wheat gene pool, which consists of landraces and wild relatives such as rye (*Secale cereale* L.), *Leymus racemosus* Tien and *Elymus tsukushiensis* Honda, is a rich source of genetic diversity. Agronomically important traits can be transferred from these gene pools to wheat through chromosome engineering. This dissertation describes chromosome engineering and pre-breeding efforts for resistance to Hessian fly and Fusarium head blight (FHB) in wheat. The germplasm with a whole arm rye translocation T2BS-2R/2L contains the highly effective Hessian fly resistance gene H21 and an unnamed powdery mildew resistance gene. Directed chromosome engineering was used to shorten the whole arm rye segment. The recovered wheat rye recombinant chromosome T2BS-2BL/2R/2L had a shorter rye segment but still contained the H21 gene and was transferred through backcrosses to adapted winter and spring wheat cultivars. This study released the germplasm KS09WGGRC51, which is used in wheat breeding programs in the U.S.A. Two novel sources of FHB resistance were identified in *L. racemosus* and *E. tsukushiensis*. Fhb3 present in the wheat *L. racemosus* T7AL/7Lr/1S Robertsonian translocation was transferred into the adapted Kansas winter wheat cultivar Fuller. The wheat *E. tsukushiensis* disomic addition translocation line confers FHB resistance. Ph1b-induced homoeologous recombination was used to produce wheat *E. tsukushiensis* recombinants. The distal and interstitial recombinants were identified using molecular markers and genomic in situ hybridization (GISH). A combination of molecular cytogenetic analyses determined that the distal recombinant

involved wheat chromosome 1A and a small distal segment originating from the E tsukushiensis chromosome arm 1E superscript ts 1S resulting in the recombinant chromosome T1AL 1AS 1E superscript ts 1S The interstitial recombinant involves an unidentified wheat chromosome and appears to be highly rearranged Both recombinants confer high levels of type II FHB resistance resistance to spread within the head based on point inoculations in the greenhouse To date these two recombinants are the smallest alien introgression with FHB resistance in common wheat This germplasm material has been released as KS14WGRC61 The distal recombinant can be used directly for breeding of FHB resistant cultivars worldwide

Cytogenetics Marcelo L. Larramendy, Sonia Soloneski, 2019-05-10 Cytogenetics Past Present and Further Perspectives discusses events that influenced the development of cytogenetics as a specialty within biology with special attention paid to methodological achievements developed worldwide that have driven the field forward Improvements to the resolution of chromosome analysis followed closely the introduction of innovative analytical technologies In that sense this book reviews and provides a brief account of the structure of chromosomes and stresses the high structural conservation in different species with an emphasis on aspects that require further research However it should be kept in mind that the future of cytogenetics will likely depend on improved knowledge of chromosome structure and function **Advances in Agronomy**, 2013-09-11 Advances in Agronomy continues to be recognized as a leading reference and a first rate source for the latest research in agronomy As always the subjects covered are varied and exemplary of the myriad of subject matter dealt with by this long running serial Maintains the highest impact factor among serial publications in agriculture Presents timely reviews on important agronomy issues Enjoys a long standing reputation for excellence in the field
