Primo, 2012 Political scientists use models to investigate and illuminate causal mechanisms generate comparative data and more But how do we justify and rationalize the method Why test predictions from a deductive and thus truth preserving system Primo and Clarke tackle these central questions in this novel work of methodology

The Politics of the First World War Scott Wolford, 2019-02-21 This analytical history of World War I offers a rigorous yet accessible training in game theory and a survey of modern political science research

The Politics of Military Coalitions Scott Wolford, 2015-09-03 Military coalitions are ubiquitous The United States builds them regularly yet they are associated with the largest most destructive and consequential wars in history When do states build them and what partners do they choose Are coalitions a recipe for war or can they facilitate peace Finally when do coalitions affect the expansion of conflict beyond its original participants The Politics of Military Coalitions introduces newly collected data designed to answer these very questions showing that coalitions expensive to build but attractive from a military standpoint are very often more if sometimes less than the sum of their parts at times encouraging war while discouraging it at others at times touching off wider wars while at others keeping their targets isolated The combination of new data new formal theories and new quantitative analysis will be of interest to scholars students and policymakers alike

Abstraction in Experimental Design Ryan Brutger, Joshua D. Kertzer, Jonathan Renshon, Chagai M. Weiss, 2022-10-27 Political scientists designing experiments often face the question of how abstract or detailed their experimental stimuli should be Typically this question is framed in terms of tradeoffs relating to experimental control and generalizability the more context introduced into studies the less control and the more difficulty generalizing the results Yet we have reason to question this tradeoff and there is relatively little systematic evidence to rely on when calibrating the degree of abstraction in studies We make two contributions First we provide a theoretical framework which identifies and considers the consequences of three dimensions of abstraction in experimental design situational hypotheticality actor identity and contextual detail Second we field a range of survey experiments varying these levels of abstraction We find that situational hypotheticality does not substantively change experimental results but increased contextual detail dampens treatment effects and the salience of actor identities moderates results in specific situations

Multimethod Research, Causal Mechanisms, and Case Studies Gary Goertz, 2017-08-15 An innovative and accessible textbook on multimethod and case study research Multimethod research has become indispensable to doing social science and is essential to anyone who conducts large scale research projects in political science sociology education

comparative law or business This authoritative and accessible book offers the first truly comprehensive approach to multimethod and case study research and is particularly aimed at students of qualitative methods in the social sciences Walking step by step through these cutting edge tools and techniques Gary Goertz introduces a new integrated approach that unites three corners of a powerful research triad causal mechanisms cross case causal inference and within case causal inference He explains how the investigation of causal mechanisms and the making of within case causal inference are the central goals of multimethod and case study research and provides a logic for connecting case studies and causal mechanism analysis with cross case analysis whether they are statistical analyses experiments or QCA In addition Goertz analyzes how one can generalize using case studies as well as systematically test game theoretic and other models using multiple case studies Provides a fully integrated approach to multimethod and case study research An essential resource for students and researchers in political science sociology education law and business Covers constraint causal mechanism game theory and case studies QCA and the use of case studies to systematically test and generalize theories An ideal textbook for a first year graduate course in methods or research design

Great Powers and International Hierarchy Daniel McCormack, 2018-08-16 Hierarchical relationships rules that structure both international and domestic politics are pervasive Yet we know little about how these relationships are constructed maintained and dismantled This book fills this lacuna through a two pronged research approach first it discusses how great power negotiations over international political settlements both respond to domestic politics within weak states and structure the specific forms that hierarchy takes Second it deduces three sets of hypotheses about hierarchy maintenance construction and collapse during the post war era By offering a coherent theoretical model of hierarchical politics within weaker states the author is able to answer a number of important questions including Why does the United States often ally with autocratic states even though its most enduring relationships are with democracies Why do autocratic hierarchical relationships require interstate coercion Why do some hierarchies end violently and others peacefully Why does hierarchical competition sometimes lead to interstate conflict and sometimes to civil conflict

Classic Papers in Natural Resource Economics Revisited Chennat Gopalakrishnan, 2018-02-02 Classic Papers in Natural Resource Economics Revisited is the first attempt to bring together a selection of classic papers in natural resource economics alongside reflections by highly regarded professionals about how these papers have impacted the field The seven papers included in this volume are grouped into five sections representing the five core areas in natural resource economics the intertemporal problem externalities and market failure property rights institutions and public choice the economics of exhaustible resources and the economics of renewable resources The seven papers are written by distinguished economists five of them Nobelists The papers originally published between 1960 and 2000 addressed key issues in resource production pricing consumption planning management and policy The original insights fresh perspectives and bold vision embodied in these papers had a profound influence on the readership and they became classics in the field This is the first attempt to

publish original commentaries from a diverse group of scholars to identify probe and analyse the ways in which these papers have impacted and shaped the discourse in natural resource economics Although directed primarily at an academic audience this book should also be of great appeal to researchers policy analysts and natural resource professionals in general This book was published as a series of symposia in the Journal of Natural Resources Policy Research
