Patricia Tosto, Randy McGonegal, William Ward, Brenda Parkes, 2014 **Genetics Education** Michal Haskel-Ittah, Anat Yarden, 2022-01-17 This edited volume presents the current state of the art of genetics education and the challenges it holds for teaching as well as for learning It addresses topics such as how genetics should be taught in order to provide students with a wide and connected view of the field It gives in depth aspects that should be considered for teaching genetics and the effect on the student's understanding This book provides novel ideas for biology teachers curriculum developers and researchers on how to confront the presented challenges in a way that may enable them to advance genetics education in the 21st century It reviews the complexity of teaching and learning genetics largely overlooked by biology textbooks and classroom instruction It composes a crucial component of scientific literacy *Making Sense of Genes* Kostas Kampourakis, 2017-03-30 What are genes What do genes do These seemingly simple questions are in fact challenging to answer accurately As a result there are widespread misunderstandings and over simplistic answers which lead to common conceptions widely portrayed in the media such as the existence of a gene for a particular characteristic or disease In reality the DNA we inherit interacts continuously with the environment and functions differently as we age What our parents hand down to us is just the beginning of our life story This comprehensive book analyses and explains the gene concept combining philosophical historical psychological and educational perspectives with current research in genetics and genomics It summarises what we currently know and do not know about genes and the potential impact of genetics on all our lives *Making Sense of Genes* is an accessible but rigorous introduction to contemporary genetics concepts for non experts undergraduate students teachers and healthcare professionals Representations of Nature of Science in School Science Textbooks Christine McDonald, Fouad Abd-El-Khalick, 2017-04-21 Bringing together international research on nature of science NOS representations in science textbooks the unique analyses presented in this volume provides a global perspective on NOS from elementary to college level and discusses the practical implications in various regions across the globe

Contributing authors highlight the similarities and differences in NOS representations and provide recommendations for future science textbooks This comprehensive analysis is a definitive reference work for the field of science education

**How we Get Mendel Wrong, and Why it Matters** Kostas Kampourakis,2023-12-28 This book illustrates that the stereotypical representations of Gregor Mendel and his work misrepresent his findings and their historical context The author sets the historical record straight and provides scientists with a reference guide to the respective scholarship in the early history of genetics The overarching argument is twofold on the one hand that we had better avoid na ve hero worshipping and understand each historical figure Mendel in particular by placing them in the actual sociocultural context in which they lived and worked on the other hand that we had better refrain from teaching in schools the naive Mendelian genetics that provided the presumed scientific basis for eugenics Key Features Corrects the distorting stereotypical representations of Mendelian genetics and provides an authentic picture of how science is done focusing on Gregor Mendel and his actual contributions to science Explains how the oversimplifications of Mendelian genetics were exploited by ideologues to provide the presumed scientific basis for eugenics Proposes a shift in school education from teaching how the science of genetics is done using model systems to teaching the complexities of development through which heredity is materialized
