Chemi- and Bioluminescence John G. Burr, 2020-08-18 This book focuses on instrumentation of chemi and bioluminescence and discusses the nature of chemiluminescence as the exothermic oxidation of a substrate organic compound to give an energy rich product that is luminescent It describes the applications of chemiluminescence

Bioluminescence and Chemiluminescence, Part C, 2000-05-12 Since the publication of Bioluminescence and Chemiluminescence Part B genes have been cloned that encode luciferases from an array of bioluminescent organisms novel applications of these genes have been developed and much has been learned of the fundamental chemistry biochemistry structural biology and biophysics of these intriguing enzymes New strategies for application of chemiluminescence technology have been developed and refined promising to further reduce the need to use radioisotopes in basic research and clinical laboratory settings Methods for detection of low levels of light continue to push the limits of detection allowing ready monitoring in real time of intricate subcellular processes within living cells This book affords a glimpse of the state of the art of a rapidly advancing field and presents to users of these methods a detailed reference of current activities in the field The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences Outlines the use of luminescent reporter technologies to monitor gene expression and protein trafficking Describes the luminescence based clinical assay technologies Details the basic biochemistry biophysics and chemistry of light emitting reactions that are critical for applications Includes explanations of the instrumentation used for detection and quantification of low level light Shows the new applications of luminescence based technologies that result largely from broad advances in recombinant DNA technologies and nonscale methods

Bioluminescence and Chemiluminescence Marlene A. Deluca, William D. McElroy, 2013-09-11 Bioluminescence and Chemiluminescence Basic Chemistry and Analytical Applications is a compendium of papers presented at the second International Symposium on Analytical Applications of Bioluminescence and Chemiluminescence in San Diego California on August 26 28 1980 Part I deals with chemiluminescence and excited states including topics on the spectroscopy of the solvent cage generation and characteristics of the excited state and the three features of chemi and bioluminescence Part II deals with events prior to producing luminol dependent chemiluminescence this part also examines the effects of stimulants on membrane potential Part III discusses bacterial bioluminescence and analyzes the properties of a lumazine protein from a bioluminescent bacterium This part also analyzes accessory enzymes responsible for such bacterial bioluminescence Part IV examines the chemistry of firefly bioluminescence and presents the formula of three reactions catalyzed by firefly luciferase Part V analyzes bioluminescence from other sources such as the

earthworm and land snails Part VI discusses the applications of bioluminescence in clinical chemistry soil science and marine biology Part VII deals with the future uses of bioluminescence while Part VIII is an abstract of other papers dealing with this subject This collection can be helpful for biologists zoologists micro biologists marine biologists and researchers dealing with bio chemistry and related disciplines

Nonradioactive Analysis of Biomolecules Christoph Kessler, 2012-12-06 New techniques and updated protocols for the detection and analysis of biomolecules proteins glycoproteins and nucleic acids are presented in the second edition of this successful laboratory manual Highly sensitive systems which are widely used in molecular biological and biomedical laboratories such as colorimetric luminescence fluorescence measuring using antibody antigen binding or hybridisation as well as PCR amplification are described in detail The clearly structured step by step protocols with practical hints and a troubleshooting guide are complemented by chapters on the theoretical background and the application of the techniques Thus the manual will enable scientists to plan design and conduct the appropriate procedures which fulfill their particular requirements

Immunoassays for the 80s A. Voller, A. Bartlett, D. Bidwell, 2012-12-06 Analyses for naturally occurring biological substances or administered materials have been with us for many years These were usually based on the physical or chemical characteristics of the substances to be measured However in recent years there has been an explosion of interest in analytical methods which made use of the high specificity and sensitivity of immunological reactions These methods can be very simple in terms of technical procedures and can usually be performed on minute samples of biological fluids factors which have ensured their ready acceptance in most laboratories Recently there have been numerous meetings on technical aspects of particular immunoassays and on their application in specific diseases We felt however that the time was ripe for an overview of the whole field To this end a conference on Immunoassays for the 80s was held at the Zoological Society of London in 1980 and this book is largely based on that meeting Both the immunoassay techniques and their numerous applications were discussed and are dealt with at length in this volume The editors wish to thank all the contributors for their chapters and to acknowledge the debt they owe to Jean Ryan NLCM without whose organization and assistance this volume would not have been completed A V D B A B

Bio- and Chemo-luminescent Sensors Loïc J. Blum, 1997 This book is aimed at scientists technologists engineers and undergraduate and graduate students involved in analytical and process biochemistry and biotechnology It reviews the potentialities of light emitting reaction associated with the sensor approach The book introduces the concepts of sensors and biosensors and places bio and chemo luminescent sensors in the general context of biosensors It then briefly describes luminescence phenomena and provides some basic knowledge necessary for understanding and exploiting light emitting reactions These luminescence reactions important from an analytical standpoint are described Also the applications of bio and chemo luminescence which make use of immobilized reagents are explained Finally there is discussion of bio and chemo luminescent sensors most of them including fiber optics
