Levine, Samuel Gorovitz, James Gallagher, 2000 Records the papers and commentaries with an edited discussion presented at an international consultation convened by the Council for International Organizations of Medical Sciences CIOMS to guide revision of the CIOMS International Ethical Guidelines for Biomedical Research Involving Human Subjects The Guidelines first issued in 1982 and then revised in 1993 are being updated and expanded to address a number of new and especially challenging ethical issues These include issues raised by international collaborative trials of drugs in developing countries especially expensive drugs and the use of placebo controls in randomized clinical trials Others arise from the complexity of research in human genetics including stem cell research and in reproductive biology Throughout particular attention is given to the difficult questions that arose during the heated debate over trials in developing countries of short duration zidovudine AZT therapy to reduce perinatal transmission of HIV The International Ethical Guidelines for Biomedical Research Involving Human Subjects set out a code of research ethics that is widely used by ethical review

committees and other bodies responsible for reviewing and overseeing the ethical design of studies and conduct of research. The revision of the Guidelines is being coordinated by CIOMS in collaboration with WHO. The consultation centered on seven specially commissioned papers authored by international experts that explore some of the more difficult issues in depth. Each is followed by an invited commentary often expressing opposing views and a summary of the issues or conclusions that emerged during the subsequent debate. The first paper on justice in international research deals with the question of whether proposals for research to be conducted in a developing country should make provision for future access of the population involved to the interventions under investigation. Also considered are questions that arise when research uses populations in developing countries to investigate interventions that will be of exclusive benefit to the industrialized world. Case studies of recent drug trials and their research protocols are discussed to illustrate circumstances in which use of populations in developing countries is justified or constitutes exploitation. Ethical challenges of the randomized controlled trial are considered in the second paper which includes a discussion on the equitable distribution of benefits and risks, the use of placebo for controls and the obligation to ensure that the participation of controls does not compromise their medical care or endanger their health. A paper on informed consent in international health research considers how cultural factors influence communication and language in the informed consent process and respect for privacy and confidentiality in the research. Subsequent papers address issues in genetics research and reproductive biology including the moral status of fetuses and the use of embryos in research and examine the contribution which international human rights instruments can make in the application of the general principles of ethics to research involving human subjects. The final paper gives an overview of capacity building and the role of communities in international biomedical research.

Dictionary of Global Bioethics Henk ten Have, Maria do Céu Patrão Neves, 2021-05-26. This Dictionary presents a broad range of topics relevant in present day global bioethics. With more than 500 entries, this dictionary covers organizations working in the field of global bioethics, international documents concerning bioethics, personalities that have played a role in the development of global bioethics as well as specific topics in the field. The book is not only useful for students and professionals in global health activities but can also serve as a basic tool that explains relevant ethical notions and terms. The dictionary furthers the ideals of cosmopolitanism, solidarity, equality, respect for difference and concern with what human beings and specifically patients have in common regardless of their backgrounds, hometowns, religions, gender, etc. Global problems such as pandemic diseases, disasters, lack of care and medication, homelessness and displacement call for global responses. This book demonstrates that a moral vision of global health is necessary and it helps to quickly understand the basic ideas of global bioethics.

[Ethical Research](#) Ulf Schmidt, Andreas Frewer, Dominique Sprumont, 2020-04-17. Ethical Research is a new and important book focusing on the centrality of the Declaration of Helsinki to the protection of human subjects involved in human experimentation. The text illuminates the history, nature, scope, context and controversies that challenge modern research.

ethics The editors and authors are international experts in their fields of study and each approaches the subject in a scholarly and accessible dialogue

Santoro, Thomas M. Gorrie, 2005-10-31 Despite the pharmaceutical industry's notable contributions to human progress including the development of miracle drugs for treating cancer, AIDS, and heart disease, there is a growing tension between the industry and the public. Government officials and social critics have questioned whether the multibillion-dollar industry is fulfilling its social responsibilities. This doubt has been fueled by the national debate over drug pricing and affordable healthcare and internationally by the battles against epidemic diseases such as AIDS in the developing world. Debates are raging over how the industry can and should be expected to act. The contributions in this book by leading figures in industry, government, NGOs, the medical community, and academia discuss and propose solutions to the ethical dilemmas of drug industry behavior. They examine such aspects as the role of intellectual property rights and patent protection, the moral and economic requisites of research and clinical trials, drug pricing, and marketing.
