Biophilic Cities Integrating Nature Into Urban Design And Planning:

Biophilic Cities Timothy Beatley, 2011 *Biophilic Cities* makes a powerful case for placing nature at the center of urban life. Tim Beatley argues that true sustainability goes beyond infrastructure; it requires cities that nurture our innate connection to the natural world. Drawing on global examples, he shows how urban areas can weave nature into every layer of design and planning, creating healthier, more vibrant and resilient communities.

Biophilic Cities Timothy Beatley, 2011-09-21 Tim Beatley has long been a leader in advocating for the greening of cities. But too often, he notes, urban greening efforts focus on everything except nature, emphasizing such elements as public transit, renewable energy production, and energy-efficient building systems. While these are important aspects of reimagining urban living, they are not enough, says Beatley. We must remember that human beings have an innate need to connect with the natural world, the biophilia hypothesis. And any vision of a sustainable urban future must place its focus squarely on nature, on the presence, conservation, and celebration of the actual green features and natural life forms. A biophilic city is more than simply a biodiverse city, says Beatley. It is a place that learns from nature and emulates natural systems, incorporates natural forms and images into its buildings and cityscapes, and designs and plans in conjunction with nature. A biophilic city cherishes the natural features that already exist but also works to restore and repair what has been lost or degraded.

In *Biophilic Cities*, Beatley not only outlines the essential elements of a biophilic city but provides examples and stories about cities that have successfully integrated biophilic elements from the building to the regional level around the world.

From urban ecological networks and connected systems of urban greenspace to green rooftops and green walls and sidewalk gardens, Beatley reviews the emerging practice of biophilic urban design and planning and tells many compelling stories of individuals and groups working hard to transform cities from grey and lifeless to green and biodiverse.
