Mueller-Matrix Tomography of Biological Tissues and Fluids Zhengbing Hu, Yuriy A. Ushenko, Iryna V. Soltys, Oleksandr V. Dubolazov, M. P. Gorsky, Oleksandr V. Olar, Liliya Yu. Trifonyuk, 2024-01-03 This book presents experimental investigations and digital image processing highlighting the interaction of polarized radiation with phase inhomogeneous and optically anisotropic biological layers The promising and efficient use of vector parametric description of the formation of polarization inhomogeneous object fields is noted Applications of a set of Mueller matrix polarimetry methods are highlighted The book includes structural and logical scheme of multi parameter singular interference and layer by layer Stokes polarimetric polarization correlation study of the structure of distributions of the number of singularities maps of local contrast of interference distributions and layer by layer maps of microscopic polarization azimuth and ellipticity determination of relationships between changes in the magnitude of statistical parameters characterizing polarization correlation distributions and pathology of prostate tumors **Advanced System Development Technologies II** Mykhailo Bezuglyi, Nadiia Bouraou, Volodymyr Mykytenko, Grygoriy Tymchyk, Artur Zaporozhets, 2025-03-18 This book is the second in the series Advanced System Development Technologies Studies in Systems Decision and Control As in the previous volume the sections of the book are grouped into three directions optoelectronic technologies medical technologies and technological support The prerequisites for solving the problem of increasing the efficiency of mechanical assembly production are presented based on the creation of a new method and system for technological preparation of small scale production in instrument engineering which takes into account the dominant influence of assembly processes on the time and cost of instrument manufacturing A new structure and sequence for the technological preparation of instrument production with a formalized relationship between machining and assembly production are proposed A new model of an assembled product in instrument engineering has been developed taking into account the labor intensity and specifics of assembly adjustment and control measurement operations as well as methods for automated design of technological assembly processes Additionally a functional model for forming the product structure based on the labor intensity of manufacturing assembly units is proposed allowing for the formulation of a substantiated plan for the production of parts A mathematical model of the assembly sequence has also been developed enabling the construction of an assembly sequence considering organizational and technical factors **Advances in Information and Communication Technologies** Mykhailo Ilchenko, Leonid Uryvsky, Larysa Globa, 2019-03-30 This book highlights the most important research areas in Information and Telecommunication Technologies as well as Radio Electronics The respective chapters share in depth and extended results in these areas with a view to resolving practically relevant and challenging issues including management services and quality control improved estimates for reliability indicators the cryptographic technology Blockchain research and forecasting of technological characteristics satellite communications multiservice transmission systems and effective technological

solutions These results can be used in the implementation of novel systems and to promote the exchange of information in e societies Given its scope the book offers a valuable resource for scientists lecturers specialists working at enterprises graduate and undergraduate students who engage with problems in Information and Telecommunication Technologies as well as Radio Electronics *Laser Polarimetry of Biological Tissues* Zhengbin Hu,I.L. Bezhenar,O.Y. Vanchulyak,A. G. Ushenko,Yu. A. Ushenko,Mykhailo P. Gorsky,Igor Meglinski,2023-06-16 This book highlights the results of numerical computer aided smart methods as part of a comprehensive statistical correlated and fractal analysis of laser polarimetry It includes a comprehensive approach to differentiation of lifelong or postmortem origin of injuries and determination of their antiquity based on the analysis of statistical and spatiotemporal frequency evolution of photometric polarization and phase parameters of laser images of histological sections of the skin of biomannequins It discusses the relationship between the coordinate distributions of the intensity of laser images from skin tissues of biomannequins and the nature of its damage It presents the analysis of relationships between changes in the mean and variance of coordinate distributions of azimuths and ellipticity of polarization images of histological skin sections and the time intervals after injury Complex differentiation of lifelong and postmortem skin injuries of biomannequins and establishment of their time intervals throughout the entire monitoring interval of changes in the mean and variance of coordinate distributions of phase shifts between orthogonal components of the amplitude of laser images of a series of corresponding histological sections are also presented in this book
