Biomimicry Hardcover:

Biomimicry Janine M. Benyus, 2009-08-11 Repackaged with a new afterword this valuable and entertaining New York Times Book Review book explores how scientists are adapting nature's best ideas to solve tough 21st century problems. Biomimicry is rapidly transforming life on earth. Biomimics study nature's most successful ideas over the past 3.5 billion years and adapt them for human use. The results are revolutionizing how materials are invented and how we compute, heal ourselves, repair the environment, and feed the world. Janine Benyus takes readers into the lab and in the field with maverick thinkers as they discover miracle drugs by watching what chimps eat when they're sick, learn how to create by watching spiders weave fibers, harness energy by examining how a leaf converts sunlight into fuel in trillionths of a second, and many more examples. Composed of stories of vision and invention, personalities and pipe dreams, *Biomimicry* is must reading for anyone interested in the shape of our future.

Biomimicry Seraphine Menu, 2020-12-01 Nature did it first. A beautiful and whimsically illustrated explanation of cool inventions like Velcro and scuba suits that were inspired by the natural world. Discover how bats led to the development of radar, whales inspired the pacemaker, and the lotus flower may help us produce indestructible clothing. Biomimicry comes from the Greek *bio* (life) and *mimesis* (imitation). Here are various and amazing ways that nature inspires us to create cool inventions in science and medicine, clothing design, and architecture. From the fireflies that showed inventors how LEDs could give off more light to the burdock plant that inspired Velcro to the high-speed trains of Japan that take the form of a kingfisher's sleek aerodynamic head, there are innumerable ways that we can create smarter, better, safer inventions by observing the natural world. Author Seraphine Menu and illustrator Emmanuelle Walker also gently explain that our extraordinary, diverse, and awe-inspiring world is like a carefully calibrated machine, and its fragile balance must be treated with extreme care and respect. Go outside, they say, observe, compare, and maybe some day you'll be the next person to be struck by a great idea.
