Natural Products and Their Derivatives in the Treatment of Inflammatory and Autoimmune Diseases

Jiao Xiao, Jian Chen, Mohamed El-Shazly, 2025-05-28. Inflammatory and autoimmune diseases are diseases of serious threat to human health and life. Over the past few decades, great effort has been made to understand the molecular mechanisms of inflammatory and autoimmune diseases, which has led to the development of drug discovery. Natural products, especially monomer compounds, possess structural diversity and significant biological activity, which are important sources of drugs and lead compounds, playing an important role in innovative drug development. In the past few years, scientists have made many exciting achievements in chemistry, pharmaceutical resources, pharmacology, preparations, new drug development, and other related fields. One of the successful examples is Prof. Tu Youyou, who won the 2015 Nobel Prize in Physiology or Medicine for her research on a natural compound, artemisinin. A plethora of studies have demonstrated that artemisinin and its analogs exhibited anti-parasitic, anti-tumor, and anti-inflammatory activities and showed potent effects in the treatment of immune diseases. Therefore, natural products have great development prospects in the field of inflammatory and autoimmune diseases. Research focusing on the functional implications of natural products and their derivatives for the treatment of inflammatory and autoimmune diseases will promote the discovery of new drugs with independent intellectual property rights. **Agentes**
