Algebra, Geometry and Mathematical Physics Abdenacer Makhoul, Eugen Paal, Sergei D. Silvestrov, Alexander Stolin, 2014-06-17 This book collects the proceedings of the Algebra Geometry and Mathematical Physics Conference held at the University of Haute Alsace France October 2011 Organized in the four areas of algebra geometry dynamical symmetries and conservation laws and mathematical physics and applications the book covers deformation theory and quantization Hom algebras and n ary algebraic structures Hopf algebra integrable systems and related math structures jet theory and Weil bundles Lie theory and applications non commutative and Lie algebra and more The papers explore the interplay between research in contemporary mathematics and physics concerned with generalizations of the main structures of Lie theory aimed at quantization and discrete and non commutative extensions of differential calculus and geometry non associative structures actions of groups and semi groups non commutative dynamics non commutative geometry and applications in physics and beyond The book benefits a broad audience of researchers and advanced students

Glider Representations Frederik Caenepeel, Fred Van Oystaeyen, 2019-11-05 Glider Representations offer several applications across different fields within Mathematics thereby motivating the introduction of this new glider theory and opening numerous doors for future research particularly with respect to more complex filtration chains Features Introduces new concepts in the Theory of Rings and Modules Suitable for researchers and graduate students working in this area and as supplementary reading for courses in Group Theory Ring Theory Lie Algebras and Sheaf Theory The first book to explicitly outline this new approach to gliders and fragments and associated concepts

Non-Associative and Non-Commutative Algebra and Operator Theory Cheikh Thiécoumbé Gueye, Mercedes Siles Molina, 2016-11-21

Presenting the collaborations of over thirty international experts in the latest developments in pure and applied mathematics this volume serves as an anthology of research with a common basis in algebra functional analysis and their applications Special attention is devoted to non commutative algebras non associative algebras operator theory and ring and module theory These themes are relevant in research and development in coding theory cryptography and quantum mechanics The

topics in this volume were presented at the Workshop on Non Associative Non Commutative Algebra and Operator Theory held May 23 25 2014 at Cheikh Anta Diop University in Dakar Senegal in honor of Professor Amin Kaidi The workshop was hosted by the university's Laboratory of Algebra Cryptology Algebraic Geometry and Applications in cooperation with the University of Almer a and the University of Málaga Dr Kaidi's work focuses on non associative rings and algebras operator theory and functional analysis and he has served as a mentor to a generation of mathematicians in Senegal and around the world

Non-Associative Algebras and Related Topics Helena Albuquerque, Jose Brox, Consuelo Martínez, Paulo Saraiva, 2023-07-28 This proceedings volume presents a selection of peer reviewed contributions from the Second Non Associative Algebras and Related Topics NAART II conference which was held at the University of Coimbra Portugal from July 18 22 2022 The conference was held in honor of mathematician Alberto Elduque who has made significant contributions to the study of non associative structures such as Lie Jordan and Leibniz algebras The papers in this volume are organized into four parts Lie algebras superalgebras and groups Leibniz algebras associative and Jordan algebras and other non associative structures They cover a variety of topics including classification problems special maps automorphisms derivations etc constructions that relate different structures and representation theory One of the unique features of NAART is that it is open to all topics related to non associative algebras including octonion algebras composite algebras Banach algebras connections with geometry applications in coding theory combinatorial problems and more This diversity allows researchers from a range of fields to find the conference subjects interesting and discover connections with their own areas even if they are not traditionally considered non associative algebraists Since its inception in 2011 NAART has been committed to fostering cross disciplinary connections in the study of non associative structures

Combinatorial Structures in Algebra and Geometry Dumitru I. Stamate, Tomasz Szemberg, 2020-09-01 This proceedings volume presents selected peer reviewed contributions from the 26th National School on Algebra which was held in Constanța Romania on August 26 September 1 2018 The works cover three fields of mathematics algebra geometry and discrete mathematics discussing the latest developments in the theory of monomial ideals algebras of graphs and local positivity of line bundles Whereas interactions between algebra and geometry go back at least to Hilbert the ties to combinatorics are much more recent and are subject of immense interest at the forefront of contemporary mathematics research Transplanting methods between different branches of mathematics has proved very fruitful in the past for example the application of fixed point theorems in topology to solving nonlinear differential equations in analysis Similarly combinatorial structures e.g Newton Okounkov bodies have led to significant advances in our understanding of the asymptotic properties of line bundles in geometry and multiplier ideals in algebra This book is intended for advanced graduate students young scientists and established researchers with an interest in the overlaps between different fields of mathematics A volume for the 24th edition of this conference was previously published with Springer under the title Multigraded Algebra and Applications ISBN 978 3

319 90493 1 **Advances in Algebra** Jörg Feldvoss, Lauren Grimley, Drew Lewis, Andrei Pavelescu, Cornelius Pillen, 2019-02-27 This proceedings volume covers a range of research topics in algebra from the Southern Regional Algebra Conference SRAC that took place in March 2017 Presenting theory as well as computational methods featured survey articles and research papers focus on ongoing research in algebraic geometry ring theory group theory and associative algebras Topics include algebraic groups combinatorial commutative algebra computational methods for representations of groups and algebras group theory Hopf Galois theory hypergroups Lie superalgebras matrix analysis spherical and algebraic spaces and tropical algebraic geometry Since 1988 SRAC has been an important event for the algebra research community in the Gulf Coast Region and surrounding states building a strong network of algebraists that fosters collaboration in research and education This volume is suitable for graduate students and researchers interested in recent findings in computational and theoretical methods in algebra and representation theory *Algebraic Geometry and Statistical Learning Theory* Sumio Watanabe, 2009-08-13 Sure to be influential Watanabe's book lays the foundations for the use of algebraic geometry in statistical learning theory Many models machines are singular mixture models neural networks HMMs Bayesian networks stochastic context free grammars are major examples The theory achieved here underpins accurate estimation techniques in the presence of singularities Scientific Legacy Of Professor Zbigniew Oziewicz: Selected Papers From The International Conference "Applied Category Theory Graph-operad-logic" Hilda Maria Colin Garcia, Jose De Jesus Cruz Guzman, Louis H Kauffman, Hanna Makaruk, 2023-09-27 Dedicated to the memory of the late Professor Zbigniew Oziewicz from Universidad Nacional Autónoma de México the book consists of papers on a wide variety of topics related to the work of Professor Oziewicz which were presented at the special conference on Graph Operads Logic GOL 2021 selected through peer review to promote his scientific legacy Professor Oziewicz was a great enthusiast and supporter of category theory and its applications in physics as well as in various areas of mathematics topology noncommutative geometry etc In particular he made significant contributions to the theory of Frobenius algebras which now are becoming more important due to their connection with topological quantum field theories that are used in mathematical physics and in quantum topology Professor Oziewicz was a great and very generous teacher who immersed his students in the beautiful ideas of category theory as well as mathematical physics and computation It was his idea to start a series of conferences under the title Graphs Operads Logic most of them held in Mexico with some of them in the USA which were a great platform to discuss various ideas connected with category theory and its various applications and to make friends with other scientists Despite his passing the GOL 2021 conference is included in this series to pay tribute to his many contributions to diverse areas of science The book is laid out in twelve main topics where we can find relevant works from distinguished experts
