Drilling and Blasting of Rocks C. Lopez Jimeno, E. Lopez Jimeno, Francisco Javier Ayala Carcedo, 2017-11-22 Rock breakage with explosives has existed since the seventeenth century when black powder came into use in mining. Since then it has progressed from the invention of dynamite to the use of heavy ANFO. During the past two decades there have been numerous technical contributions which have brought a better understanding of rock fragmentation with explosives, an improvement in drilling equipment and a noticeable evolution in the development of new explosives and blasting accessories. The Geomining Technological Institute of Spain ITCE aware of this progress and of the importance which the breakage process has acquired in mining and civil engineering projects has ordered the publication of *Drilling and Blasting of Rocks*. The purpose of this Handbook is to give basic knowledge of the drilling systems, the types of available explosives and the accessories and the parameters that intervene in blast designing, whether controllable or not. At the same time the objectives and contents contribute to improved safety in mining. The Handbook is meant for all professionals who are involved with explosives in mining operations and civil engineering projects as well as for students of technical schools. **USA Mining & Construction**, 2006 *Advances in Terrestrial Drilling*: Yoseph Bar-Cohen, Kris Zacny, 2020-12-21 *Advances in Terrestrial Drilling* Ground Ice and Underwater includes the latest drilling and excavation principles and processes for terrestrial environments. The chapters cover the history of drilling and excavation, drill types, drilling techniques and their advantages and associated issues, rock coring including acquisition, damage control, caching and transport and data interpretation as well as unconsolidated soil drilling and borehole stability. This book includes a description of the basic science of the drilling process, associated processes of breaking and penetrating various media, the required hardware and the process of excavation and analysis of the sampled media. Describes recent advances in terrestrial drilling. Discusses drilling in the broadest range of media including terrestrial surfaces, ice and underwater from shallow penetration to very deep. Provides an in depth description of key drilling techniques and the unified approach to assessing the required tools for given drilling requirements. Discusses environmental effects on drilling, current challenges of drilling and excavation and methods that are used to address these. Examines novel drilling and excavation approaches. Dr Yoseph Bar-Cohen is the Supervisor of the Electroactive Technologies Group <http://ndeaa.jpl.nasa.gov> and a Senior Research Scientist at the Jet Propulsion Lab, Caltech, Pasadena, CA. His research is focused on electro-mechanics including planetary sample handling mechanisms, novel actuators that are driven by such materials as piezoelectric and EAP, also known as artificial muscles and biomimetics.
