Algae And Environmental Sustainability Developments In Applied Phycology:

Algae and Environmental Sustainability Bhaskar Singh, Kuldeep Baudh, Faizal Bux, 2015-12-22 This book presents the dynamic role of algae in a sustainable environment Two major aspects namely bioenergy and bioremediation have been elaborated in various chapter contributed by scientists and teachers from different geographical areas throughout the world Algal biofuels is an emerging area of equal interest to researchers industries and policy makers working or focusing on alternative i e renewable fuels Algae have been an area of interest due to their wide range of applications Over the last 5 decades eukaryotic algae have been used in the aquaculture industry as feed for invertebrates providing a rich source of antioxidants dietary fiber minerals and protein More recently there has been a focus on the use of algal biomass in the development of alternative fuels The extraction of oil from algae has been widely explored as a much more viable feedstock than plant based oils in large scale fuel production using algae as feedstock has the advantages that it doesn t require arable land and that wastewater can be used as a source of nutrients in their culture The multifunctional approach of algae includes pollution remediation carbon sequestration biofuels production and delivery of value added products However there are still some obstacles that need to be overcome to make their use as potential feedstock for biofuels techno economically feasible In order to maintain the sustainability aspect of algal biofuels various aspects have to be studied and critically analyzed to assess the long term sustainability of algal derived biofuels This book discusses the role of algae as a promising future feedstock for biofuels They are known to sequester carbon in much larger amounts than plants and as such the book also describes their phycoremediation potential for conventional as well as emerging contaminants It describes the role of anaerobic digestion in algal biorefineries bioreactions and process parameters biogas recovery and reuse The role of algal biofilm based technology in wastewater treatment and transforming waste into bio products is discussed and remediation of sewage water through algae is assessed The book also describes the production of biohydrogen bio oil biodiesel and the major bottlenecks in their usage The emerging characterization techniques of these biofuels bio oil and biodiesel are described as are the decolorizing potential of algae and the genetic engineering techniques that could enhance the production of lipids in algae Other aspects of the book include the role of remote sensing technology in the monitoring of algae and a life cycle assessment of algal biofuels

book in this two volume set explores phycoremediation applications and the sustainable use of algae for biofuels and other products of economic value It also looks at aspects such as macro and micro algal impact on marine ecosystem and remote sensing of algal blooms The commercial value of chemicals of value to food and health is about 6 billion annually of which 30 percent relates to micro and macro algal metabolites and products for health food applications As a whole the two volumes explore the aspects of diversity of micro and macro algal forms their traditional uses their constituents which are of value for food feed specialty chemicals bioactive compounds for novel applications and bioenergy molecules Bio business and the market share of algae based products are also dealt with providing global perspectives **Sustainable Downstream**

Processing of Microalgae for Industrial Application Kalyan Gayen, Tridib Kumar Bhowmick, Sunil Kumar

Maity, 2019-09-05 Microalgae can be future resource for industrial biotechnology In current energy crisis era microalgae are under tremendous research focus for the production of biodiesel due to their high photosynthetic efficiency growth rate and high lipid content compared to territorial plants However the large scale production of algal biomass and downstream processing of harvested algae towards bio fuels are facing several challenges from economic viability perspective Apart from bio fuels the microalgae synthesize number of bio molecules such as pigments e g chlorophyll carotenoid protein e g lectin phycobiliprotein and carbohydrates e g agar carrageenan alginate fucodan which are available in the various forms of microalgal products Therefore developing a strategy for large scale production and use of algal biomass for the co production of these value added macromolecules is thus imperative for the improvement of the economics of algal biorefinery In the above context this book covers three major areas i commercial scale production of bio molecules from microalgae ii sustainable approach for industrial scale operation and iii optimization of downstream processes Each of these sections is composed of several chapters written by the renowned academicians industry experts Furthermore in this book a significant weightage is given to the industry experts around 50% to enrich the industrial perspectives We hope that amalgamate of fundamental knowledge from academicians and applied research information from industry experts will be useful for forthcoming implementation of a sustainable integrated microalgal biorefinery This book highlights following Explores biomolecules from microalgae and their applications Discusses microalgae cultivations and harvesting Examines downstream processing of biomolecules Explores sustainable integrated approaches for industrial scale operations Examines purification techniques specific for microalgal proteins Omega 3 fatty Acids carbohydrates and pigments **Bioprocess Engineering**

for a Green Environment V. Sivasubramanian, 2018-05-04 Bioprocess Engineering for a Green Environment examines numerous bioprocesses that are crucial to our day to day life specifically the major issues surrounding the production of energy relating to biofuels and waste management The nuance of this discussion is reflected by the text s chapter breakdown providing the reader with a fulsome investigation of the energy sector the importance of third generation fuels and the application of micro and macroalgae for the production of biofuels The book also provides a detailed exploration of

biocatalysts and their application to the food industry bioplastics production conversion of agrowaste into polysaccharides as well as the importance of biotechnology in bio processing Numerous industries discharge massive amounts of effluents into our rivers seas and air systems As such two chapters are dedicated to the treatment of various pollutants through biological operation with hopes of achieving a cleaner greener environment This book represents the most comprehensive study of bioprocessing and its various applications to the environment available on the market today It was furthermore written with various researchers in mind ranging from undergraduate and graduate students looking to enhance their knowledge of the topics presented to scholars and engineers interested in the bioprocessing field as well as members of industry and policy makers Provides a comprehensive overview of bioprocesses that apply to day to day living Is learner centered providing detailed diagrams for easy understanding Explores the importance of biocatalysts and their applications to the food industry as well as bioplastics production Examines the unique capabilities of bioprocess engineering and its ability to treat various pollutants
