Wellborn, 2018-05-22 Crustaceans are increasingly being used as model organisms in all fields of biology including neurobiology developmental biology animal physiology evolutionary ecology biogeography and resource management Crustaceans have a very wide range of phenotypes and inhabit a diverse array of environments ranging from the deep sea to high mountain lakes and even deserts The evolution of their life histories has permitted crustaceans to successfully colonize this variety of habitats Few other taxa exhibit such a variety of life histories and behavior A comprehensive overview of their life histories is essential to the understanding of many aspects of their success in marine and terrestrial environments This volume provides a general overview of crustacean life histories Crustaceans have particular life history adaptations that have permitted them to conquer all environments on earth Crustacean life cycles have evolved to maximize fecundity growth and ageing in a wide range of environmental conditions Individual contributions contrast benefits and costs of different life histories including sexual versus asexual production semelparity versus iteroparity and planktonic larvae versus direct development Important aspects of particular behaviors are presented e.g. migrations defense and territorial behaviors anti predator behavior symbiosis *Developmental Biology and Larval Ecology* Klaus Anger, Steffen Harzsch, Martin Thiel, 2020-06-17 This book offers an updated and comprehensive overview of crustacean development **Aquatic Parasitology: Ecological and Environmental Concepts and Implications of Marine and Freshwater Parasites** Nico J. Smit, Bernd Sures, 2025-06-16 This open access volume is the first to provide a comprehensive

overview of the ecological and environmental characteristics of marine and freshwater parasites In three clearly organized sections world leading authors present the current state of our knowledge as well as the future trends for their respective fields in aquatic parasitology First the basic life cycle strategies of the various major groups of aquatic parasites are presented including protists myxozoa aquatic fungi helminths and arthropods Subsequent chapters explore the ecological implications of aquatic parasites covering topics such as biodiversity evolution community structures behavior and conservation to name a few In addition important developments in research are presented such as the use of different molecular tools and eDNA in aquatic parasitology The final section is devoted to the new field of environmental parasitology where readers will find contributions on biological markers invasive species and bioindicators of environmental pollution among others Due attention is also given to zoonoses aquaculture and the effects of climate change on aquatic parasites All chapters include original high quality illustrations and never before seen photographs which complement the diverse aspects of aquatic parasitology described Thus this book is a must for every parasitologist and ecologist

Lifestyles and Feeding Biology Martin Thiel, Les Watling, 2015-04-09 This second volume in the Natural History of the Crustacea series examines how crustaceans the different body shapes and adaptations of which are described in volume 1 make a living in the wide range of environments they inhabit and how they exploit food sources The contributions in the volume give synthetic overviews of particular lifestyles and feeding mechanisms and offer a fresh look at crustacean life styles through the technological tools that have been applied to recent crustacean research These include SEM scanning electron microscope techniques micro optics and long term video recordings that have been used for a variety of behavioral studies The audience will include not only crustacean biologists but evolutionary ecologists who want to understand the diversification of particular life styles ecologists who follow the succession of communities biogeochemists who estimate the role of crustaceans in geochemical fluxes and biologists with a general interest in crustaceans **Theriogenology** Rita Payan-Carreira, 2017-09-06 Theriogenology the field that studies animal reproductive health and disease is a challenging field that shows a steady growth It covers diverse aspects of reproduction in domestic and wild animals including the assisted reproductive techniques which have enormously enhanced the ability to rescue endangered species and provide a strong support to the high reproductive efficiency requested by livestock production Reproductive success as well as infertility is the culmination of complex physiological and adaptive processes that guarantee at the end a species ability to reproduce and its survival in a challenging and ever changing environment In this book we present to you a collection of manuscripts exploring various aspects of the reproductive function of mammal and marine species I hope you find this a useful book in your collection [Neohelice granulata, a Model Species for Studies on Crustaceans, Volume I](#) Tomás A. V. Radhakrishnan, Bruce F. Phillips, Gopalakrishnan Achamveetil, 2019-11-28 This book is an important addition to the knowledge of lobster research The book complements other books published on lobster research and management as it focuses on Indian lobster fisheries and aquaculture developments where there have been nearly 350 research papers and reports and 19 PhD awards The book has 15 chapters written by international experts covering many aspects of the biology of a number of spiny and slipper lobster species occurring in India and world oceans with maps illustrating global distribution of spiny lobster families genera and species An updated taxonomy and checklist of marine lobsters the status and management of lobster fisheries in India and Indian Ocean Rim countries and a review of aquaculture research in India and other major countries have also been presented The book is timely as the 2nd International Indian Ocean Expedition IIOE is currently underway 2015-2020 50 years after the original IIOE 1959-1965 with some of the original lobster research on the biology and distribution of phyllosoma larvae being undertaken on the plankton samples collected during the first IIOE Many of the chapters are contributed by the authors from Central Marine Fisheries Research Institute CMFRI which has been collecting fishery and biological data on lobsters since 1950 when lobster fishing began on a subsistence scale followed by some industrial fishing for lobsters in different parts of India Unfortunately the development of some of these lobster fisheries was followed by overfishing due to lack of enforcement of regulations The book provides a valuable addition to our knowledge of the biology fisheries and aquaculture of spiny and slipper lobsters
