Abusing Science The Case Against Creationism

Jeff Astley, David Brown, Ann Loades

Abusing Science The Case Against Creationism:

Abusing Science Philip Kitcher, 1983-06-23 Abusing Science is a manual for intellectual self defense the most complete available for presenting the case against Creationist pseudo science It is also a lucid exposition of the nature and methods of genuine science The book begins with a concise introduction to evolutionary theory for non scientists and closes with a rebuttal of the charge that this theory undermines religious and moral values It will astonish many readers that this case must still be made in the 1980s but since it must Philip Kitcher makes it irresistibly and forcefully Not long ago a federal court struck down an Arkansas law requiring that scientific Creationism be taught in high school science classes Contemporary Creationists may have lost one legal battle but their cause continues to thrive Their efforts are directed not only at state legislatures but at local school boards and textbook publishers As Kitcher argues in this rigorous but highly readable book the integrity of science is under attack The methods of inquiry used in evolutionary biology are those which are used throughout the sciences Moreover modern biology is intertwined with other fields of science physics chemistry astronomy and geology Creationists hope to persuade the public that education in science should be torn apart to make room for a literal reading of Genesis Abusing Science refutes the popular complaint that the scientific establishment is dogmatic and intolerant denying academic freedom to the unorthodox It examines Creationist claims seriously and systematically one by one showing clearly just why they are at best misguided at worst ludicrous **Abusing Science** Philip Kitcher, 1982

Abusing Science Philip Kitcher, 1982 The Pseudoscience Wars Michael D. Gordin, 2024-05-31 Properly analyzed the collective mythological and religious writings of humanity reveal that around 1500 BC a comet swept perilously close to Earth triggering widespread natural disasters and threatening the destruction of all life before settling into solar orbit as Venus our nearest planetary neighbor Sound implausible Well from 1950 until the late 1970s a huge number of people begged to differ as they devoured Immanuel Velikovsky s major best seller Worlds in Collision insisting that perhaps this polymathic thinker held the key to a new science and a new history Scientists on the other hand assaulted Velikovsky s book his followers and his press mercilessly from the get go In The Pseudoscience Wars Michael D Gordin resurrects the largely forgotten figure of Velikovsky and uses his strange career and surprisingly influential writings to explore the changing definitions of the line that separates legitimate scientific inquiry from what is deemed bunk and to show how vital this question remains to us today Drawing on a wealth of previously unpublished material from Velikovsky s personal archives Gordin presents a behind the scenes history of the writer s career from his initial burst of success through his growing influence on the counterculture heated public battles with such luminaries as Carl Sagan and eventual eclipse Along the way he offers fascinating glimpses into the histories and effects of other fringe doctrines including creationism Lysenkoism parapsychology and more all of which have surprising connections to Velikovsky s theories Science today is hardly universally secure and scientists seem themselves beset by critics denialists and those they label pseudoscientists as seen all

too clearly in battles over evolution and climate change The Pseudoscience Wars simultaneously reveals the surprising Cold War roots of our contemporary dilemma and points readers to a different approach to drawing the line between knowledge and nonsense *Stephen Jay Gould and the Politics of Evolution* David F. Prindle, **Defining Science** Charles Alan Taylor, 1996 The most interesting entry point to the demarcation problem in science since Popper's seminal formulation Steve Fuller Professor of Sociology Social Policy Durham University What is science What isn't science And who draws the line between them These are rhetorical concerns as Charles A Taylor demonstrates in this ambitious book about the theoretical and cultural underpinnings of scientific practice By showing how boundaries between science and nonscience are rhetorically constructed and socially enforced Defining Science reveals the political and philosophical significance of such distinctions Taylor examines the traditional demarcation problem the problem of defining the boundaries of science as an ongoing rhetorical negotiation involving a full range of historical interests and social actors from researchers and lab technicians to governmental and industrial patrons program administrators political representatives journalists and educators His case studies of the recent debates over creationism and cold fusion clearly demonstrate how the rhetorical dynamics of science operate within different fields In both cases presented here with concision and insight prevailing demarcations or defining portrayals of science emerge as far more nuanced than traditional accounts allow Taylor analyzes traditional approaches to demarcation in science in order to incorporate their insights into his larger rhetorical view His reformulation of philosophical historical and sociological accounts of science clearly illustrates the intellectual value of an interdisciplinary rhetoric of demarcation Furthermore Defining Science suggests how we as a community can positively influence future constructions of science and society This book confronts what is arguably the late twentieth century's definitive problem in a provocative and interesting way It will be of interest to anyone engaged with the question of knowledge in public life Charles Arthur Willard Professor and Chair of the Department of Communication University of Louisville Science and Religion (Problems in Theology) Jeff Astley, David Brown, Ann Loades, 2004-11-01 This reader brings together carefully selected material from a wide range of authors on the relationships between science religion and theology It samples the recent literature on the challenges to religion posed by both modern physics and evolutionary biology as well as exploring the relationship between scientific and theological approaches Topics include models of interaction between science and religion historical reflections on the conflict thesis scientific and theological methods creation and modern cosmology uncertainty and chaos creationism and evolutionary theory the anthropic principle and design and the challenge of reductionism Contributors include Ian Barbour Michael Behe Richard Dawkins John Habgood Mary Hesse T H Huxley Alister McGrath Arthur Peacocke John Polkinghorne Michael Ruse Keith Ward and Fraser Watts Philosophy of Science for Biologists Kostas Kampourakis, Tobias Uller, 2020-09-24 A short and accessible introduction to philosophy of science for students and researchers across the life sciences **Mathematics, Science, and Postclassical Theory**

Barbara Herrnstein Smith, Arkady Plotnitsky, 1997-03-04 *Mathematics Science and Postclassical Theory* is a unique collection of essays dealing with the intersections between science and mathematics and the radical reconceptions of knowledge language proof truth and reality currently emerging from poststructuralist literary theory constructivist history and sociology of science and related work in contemporary philosophy Featuring a distinguished group of international contributors this volume engages themes and issues central to current theoretical debates in virtually all disciplines agency causality determinacy representation and the social dynamics of knowledge In a substantive introductory essay the editors explain the notion of postclassical theory and discuss the significance of ideas such as emergence and undecidability in current work in and on science and mathematics Other essays include a witty examination of the relations among mathematical thinking writing and the technologies of virtual reality an essay that reconstructs the conceptual practices that led to a crucial mathematical discovery or construction in the 19th century a discussion of the implications of Bohr's complementarity principle for classical ideas of reality an examination of scientific laboratories as hybrid communities of humans and nonhumans an analysis of metaphors of control purpose and necessity in contemporary biology an exploration of truth and lies and the play of words and numbers in Shakespeare Frege Wittgenstein and Beckett and a final chapter on recent engagements or nonengagements between rationalist realist philosophy of science and contemporary science studies Contributors Malcolm Ashmore Michel Callon Owen Flanagan John Law Susan Oyama Andrew Pickering Arkady Plotnitsky Brian Rotman Barbara Herrnstein Smith John Vignaux Smyth E Roy Weintraub

Denying Science John Grant, 2011-10-04 Is global warming just scaremongering by climatologists conspiring to protect their jobs Is evolution just a theory Is autism caused by vaccinations The answer to all of these questions is of course no The scientific evidence is now in and it's conclusive on these and many more issues that are fundamental to our knowledge and wellbeing But you'd never know this if all of your information came from the popular media or your upbringing and immediate circle of influence didn't include critical thinking and basic scientific literacy As this witty book with a very serious message shows our culture has in recent decades been characterized by a widespread antagonism toward science and the not always welcome messages it brings Large sections of the supposedly sophisticated populations in the developed nations are in an active state of denial Not only do they deny scientific evidence but they also call into question the very competence of science as a descriptor of reality In short they deny reality The author surveys the gamut of clearly unscientific ideas concerning the food we eat the medicines and potions we are either afraid of or advised to take our sex preferences and a host of other issues that are raised by various panics urban legends and a general climate of misinformation He also examines how special interests from agribusiness to pharmaceutical companies to creationists actively work to distort or suppress scientific findings While the tendency may be to laugh at some of the ridiculous notions catalogued in the author's overview of bogus ideas the overall picture he creates is anything but funny This book reminds the reader that the future of free increasingly complex societies depends on an

educated citizenry that is able to think clearly and critically based on reliable information

Adopting the Tune of Expression: An Mental Symphony within **Abusing Science The Case Against Creationism**

In a global eaten by displays and the ceaseless chatter of fast conversation, the melodic elegance and psychological symphony created by the prepared word usually disappear in to the background, eclipsed by the relentless noise and interruptions that permeate our lives. However, located within the pages of **Abusing Science The Case Against Creationism** a charming fictional prize full of natural feelings, lies an immersive symphony waiting to be embraced. Crafted by an outstanding composer of language, this charming masterpiece conducts viewers on a psychological journey, skillfully unraveling the concealed melodies and profound affect resonating within each carefully constructed phrase. Within the depths of the touching evaluation, we will examine the book is key harmonies, analyze their enthralling publishing style, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.
