Developing Academic Literacy British Association of Lecturers in English for Academic Purposes. Conference, 2010 Selected papers presented at the conference held by BALEAP British Association of Lecturers in English for Academic Purposes at the University of

Southampton in the spring of 2003 *Academic Literacy* Jill Lewis, 1996 Designed for mid level developmental readers
Academic Literacy combines a reading strategies handbook with discipline specific readings Part I Handbook for Reading
and Study Strategies emphasizes active reading and the basics of comprehension topics main ideas supporting details
patterns of organization understanding vocabulary and notetaking The seven chapters in Part II Discipline Specific Readings
introduce students to readings typically encountered in seven different college disciplines Writing Games Christine Pears
Casanave, 2005-04-11 This work explores how writers from several different cultures learn to write in their academic settings
and how their writing practices intersect with their evolving identities as students and professionals in academic
environments Multilingual Learners and Academic Literacies Daniella Molle, 2015 Shifting the discourse from a focus on
academic language to the more dynamic construct of academic literacies this volume offers a conceptual framework for
examining academic literacies as situated overlapping meaning making practices Academic Literacy and the Nature of
Expertise Cheryl Geisler, 2013-11-05 The first full length account integrating both the cognitive and sociological aspects of
reading and writing in the academy this unique volume covers educational research on reading and writing rhetorical
research on writing in the disciplines cognitive research on expertise in ill defined problems and sociological and historical
research on the professions The author produced this volume as a result of a research program aimed at understanding the
relationship between two concepts literacy and expertise which traditionally have been treated as quite separate phenomena
A burgeoning literature on reading and writing in the academy has begun to indicate fairly consistent patterns in how
students acquire literacy practices This literature shows furthermore that what students do is quite distinct from what
experts do While many have used these results as a starting point for teaching students how to be expert the author has
chosen instead to ask about the interrelationship between expert and novice practice seeing them both as two sides of the
same project a cultural historical professionalization project aimed at establishing and preserving the professional privilege
The consequences of this professionalization project are examined using the discipline of academic philosophy as the site for
the author's investigations Methodologically unique these investigations combine rhetorical analysis protocol analysis and
the analysis of classroom discourse The result is a complex portrait of how the participants in this humanistic discipline use
their academic literacy practices to construct and reconstruct a great divide between expert and lay knowledge This
monograph thus extends our current understanding of the rhetoric of the professions and examines its implications for
education
