Steel Designers' Manual SCI (Steel Construction Institute), 2016-06-27 In 2010 the then current European national standards for building and construction were replaced by the EN Eurocodes a set of pan European model building codes developed by the European Committee for Standardization The Eurocodes are a series of 10 European Standards EN 1990 EN 1999 that provide a common approach for the design of buildings other civil engineering works and construction products The design standards embodied in these Eurocodes will be used for all European public works and are set to become the de facto standard for the private sector in Europe with probable adoption in many other countries This classic manual on structural steelwork design was first published in 1955 since when it has sold many tens of thousands of copies worldwide For the seventh edition of the Steel Designers Manual all chapters have been comprehensively reviewed revised to ensure they reflect current approaches and best practice and brought in to compliance with EN 1993 Design of Steel Structures the so called Eurocode 3

Music-Inspired Harmony Search Algorithm Zong Woo Geem, 2009-02-19 Calculus has been used in solving many scientific and engineering problems For optimization problems however the differential calculus technique sometimes has a drawback when the objective function is step wise discontinuous or multi modal or when decision variables are discrete rather than continuous Thus researchers have recently turned their interests into metaheuristic algorithms that have been inspired by natural phenomena such as evolution animal behavior or metallic annealing This book especially focuses on a music inspired metaheuristic algorithm harmony search Interestingly there exists an analogy between music and optimization each musical instrument corresponds to each decision variable musical note corresponds to variable value and harmony corresponds to solution vector Just like musicians in Jazz improvisation play notes randomly or based on experiences in order to find fantastic harmony variables in the harmony search algorithm have random values or previously memorized good values in order to find optimal solution

Colliding Bodies Optimization A. Kaveh, V.R. Mahdavi, 2015-06-10 This book presents and applies a novel efficient meta heuristic optimization algorithm called Colliding Bodies Optimization CBO for various optimization problems The first part of the book introduces the concepts and methods involved while the second is devoted to the applications Though optimal design of structures is the main topic two chapters on optimal analysis and applications in constructional management are also included This algorithm is based on one dimensional collisions between bodies with each agent solution being considered as an object or body with mass After a collision of two moving bodies with specified masses and velocities these bodies again separate with new velocities This collision causes the agents to move toward better positions in the search space The main algorithm CBO is internally parameter independent setting it apart from previously developed meta heuristics This algorithm is enhanced ECBO for more efficient applications in the optimal design of structures The algorithms are implemented in standard computer programming languages MATLAB and C and two main codes are provided for ease of use
