Architect And Engineer A Study In Sibling Rivalry:

Architect and Engineer Andrew Saint, 2007 This book considers how architects and engineers have related to one another over history There are many controversial issues This book enquires into the pattern of these relationships since the Renaissance looking at what has actually taken place when architecture and engineering have interlocked It looks at projects such as building of the Eiffel Tower Pompidou Centre Chicago skyscraper and at personalities such as Vauban Perronet Frank Lloyd Wright Le Corbusier and Ove Arup

Architects and Engineers Roland May, 2022-10-24 In the first decades of the 20th century civil engineers were widely seen as a role model for future architects Their role within the contemporary architecture movements however was hardly discussed To this day even fundamental questions about collaborations rivalries or conflicts between the two sister disciplines still await answers This volume brings together contributions by international scholars on the cooperation between architects and civil engineers in various countries in the interwar period By offering both insights into national peculiarities and new reflections on the general nature character and significance of such joint efforts it opens exciting new perspectives on the modern building culture of Europe and beyond

Constructing Building Enclosures Clifton Fordham, 2020-07-21 Constructing Building Enclosures investigates and interrogates tensions that arose between the disciplines of architecture and engineering as they wrestled with technology and building cultures that evolved to deliver structures in the modern era At the center of this history are inventive architects engineers and projects that did not settle for conventional solutions technologies and methods Comprised of thirteen original essays by interdisciplinary scholars this collection offers a critical look at the development and the purpose of building technology within a design framework Through two distinct sections the contributions first challenge notions of the boundaries between architecture engineering and construction The authors then investigate twentieth century building projects exploring technological and aesthetic boundaries of postwar modernism and uncovering lessons relevant to enclosure design that are typically overlooked Projects include Louis Kahn's Weiss House Minoru Yamasaki's Science Center Sigurd Lewerentz's Chapel of Hope and more An important read for students educators and researchers within architectural history construction history building technology and design this volume sets out to disrupt common assumptions of how we understand this history

Function and Fantasy: Iron Architecture in the Long Nineteenth Century Paul Dobraszczyk, Peter Sealy, 2016-07-01 The introduction of iron and later steel construction and decoration transformed architecture in the nineteenth century While the structural employment of iron has been a frequent subject of study this book re-directs scholarly scrutiny on its place in the aesthetics of architecture in the long nineteenth century Together its eleven unique and original chapters chart for the first time the global reach of iron's architectural reception from the first debates on how iron could be incorporated into architecture's traditional aesthetics to the modernist cleaving of its structural and ornamental roles The book is divided into three sections Formations considers the rising tension between the desire to translate traditional architectural motifs into

iron and the nascent feeling that iron buildings were themselves creating an entirely new field of aesthetic expression Exchanges charts the commercial and cultural interactions that took place between British iron foundries and clients in far flung locations such as Argentina Jamaica Nigeria and Australia Expressing colonial control as well as local agency iron buildings struck a balance between pre fabricated functionalism and a desire to convey beauty value and often exoticism through ornament Transformations looks at the place of the aesthetics of iron architecture in the late nineteenth and early twentieth centuries a period in which iron ornament sought to harmonize wide social ambitions while offering the tantalizing possibility that iron architecture as a whole could transform the fundamental meanings of ornament Taken together these chapters call for a re evaluation of modernism s supposedly rationalist interest in nineteenth century iron structures one that has potentially radical implications for the recent ornamental turn in contemporary architecture

Towards A New Engineering - second edition Mentor Lljunji, 2022-08-25 This second expanded edition of Towards A New Engineering is almost double in volume compared to the first edition with several new chapters new material and is more graphically oriented in order to guide readers more smoothly throughout the text It is a collection of intimate reflections on structural engineering its present and future A testimony on many issues that bothered the author during his years of designing structures A critique and praise of built structures structural design strategies codes the educational system digital tools and much more It s a professional memoir dedicated to the unsung heroes of structural engineering Not the unknown ones but the unrecognized ones It s an album of their thoughts and designs This book is a rare possibility for structural engineers to consider the meaning of their profession to meditate about it and its relation to or distinction from the practice of architecture This is a collection of thoughts but not conclusions and theories The book is recommended for all structural and architectural engineers as well as for students of engineering and architecture especially those who have chosen structural engineering as their lifelong profession It is an eye opening book that will provide a clearer more realistic perspective while also offering an idea of where engineers will be in the future and how they should adapt to the time that comes

Assembling the Architect George Barnett Johnston, 2020-01-23 Assembling the Architect explores the origins and history of architectural practice It unravels the competing interests that historically have structured the field and cultivates a deeper understanding of the contemporary profession Focusing on the period 1870 to 1920 when the foundations were being laid for the U S architectural profession that we recognize today this study traces the formation and standardization of the fundamental relationships among architects owners and builders as codified in the American Institute of Architects very first Handbook of Architectural Practice It reveals how these archetypal roles have always been fluid each successfully redefining their own agency with respect to the others in the constantly shifting political economy of building Far from being a purely historical study the book also sheds light on today s digitally enabled profession Contemporary architectural tools and disciplinary ideals continue to be shaped by the same fundamental tensions and emergent modes of practice such as BIM

Building Information Modelling and IPD Integrated Project Delivery represent the realization of programs and agendas that have been over a century in play Essential reading for professional practice courses as a contextual and historical companion to the Handbook Assembling the Architect provides a critical perspective of the profession that is fundamental to understanding current architectural practice

Shaping the Surface Stephen Kite, 2022-11-17 Shaping the Surface explores the history of modern British architecture through the lens of surface materiality and decoration Picking up on a trait that art historian Nikolaus Pevsner first identified as a national mania for beautiful surface quality this book makes a new contribution to architectural history and visual culture in its detailed examination of the surfaces of British architecture from the middle of the 19th century up to the turn of the 21st century Tracing this continuing sensibility to surface all the way through to the modern era it explores how and why surface and materiality have featured so heavily in recent architectural tradition examining the history of British architecture through a selection of key cultural moments and movements from Romanticism and the Arts and Crafts to Brutalism High Tech Post Modernism Neo Vernacular and the New Materiality Embedded within the narrative is the question of whether such national characters can exist in architecture at all and indeed the extent to which it is possible to identify a British architectural consciousness in an architectural tradition characterised by its continuous importation of theories ideas materials and people from around the globe Shaping the Surface provides a deep critique and meditation on the importance of surface and materiality for architects designers and historians everywhere in Britain and beyond while it also serves as a thematic introduction to modern British architectural history with in depth readings of the works of many key British architects artists and critics from Ruskin and William Morris to Alison and Peter Smithson Eduardo Paolozzi Richard Rogers and Caruso St John
