Lex Ad Astra Matthew Gillett, Katja Grunfeld, Iva Ramuš Cvetkovič, 2025-03-13 Outer space has long been considered the last untouched wilderness. However, non-State actors are increasingly active in space, heightening the risk of space pollution. Space law designed during the Cold War is State-centric and makes inadequate provision for non-State actors. In the face of this emerging threat, this book examines potential avenues of redress in space law, including the Outer Space Treaty along with international environmental law, international criminal law, international humanitarian law, and international human rights law. It also reviews the national legislation adopted by space-faring States at the domestic level. In parallel, the book examines the deeper theoretical implications addressing non-State actor conduct under international law. Ultimately, it proposes a ground-breaking new international law instrument to hold non-State actors responsible for space pollution.

Online Review, 1979 **Robot Control 1991 (SYROCO'91)** I. Troch, 2014-05-23 This volume contains 92 papers on the state of the art in robotics research. In this volume, topics on modelling and identification are treated first as they build the basis for practically all control aspects. Then the most basic control tasks are discussed, i.e. problems of inverse kinematics. Groups of papers follow which deal with various advanced control aspects. They range from rather general methods to more specialized topics such as force control and control of hydraulic robots. The problem of path planning is addressed and strategies for robots with one arm, for mobile robots, and for multiple arm robots are presented. Also covered are computational improvements and software tools for simulation and control, the integration of sensors and sensor signals in robot control.
