Considerably expanded and updated, it now includes new or additional material on the effectiveness of beta-beta feedback as a method of obtaining coordination during turns using the F-15 as the aircraft model, the root locus analysis of a generic acceleration autopilot used in many air-to-air and surface-to-air guided missiles, the guidance systems of the AIM-9L Sidewinder as well as bank-to-turn missiles, various types of guidance including proportional navigation and line of sight and lead angle command guidance, the coupling of the output of a director fire control system into the autopilot, the analysis of multivariable control systems and methods for modeling the human pilot plus the integration of the human pilot into an aircraft flight control system. Also features many new additions to the appendices. *Automatic Control of Aircraft and Missiles* John H.
