

# A Blue Moon? Really?

The moon can sometimes appear reddish, especially during eclipses. But what we call a "blue moon" has nothing to do with its color. Normally there are 12 fully lit, or **full**, moons per year. A **season** of three months should therefore contain three full moons.

Below: August 2012, a month with two full moons

On occasions where there are four full moons in a season instead of three, the third of the full moons is traditionally called a "blue" moon.

A blue moon happens on average about once in 2.7 years.

Occasionally two full moons will fall within the same month. Some people call the second full moon a blue moon but this is not the term's original meaning.
