Astrobiology: Future Perspectives P. Ehrenfreund, W.M. Irvine, T. Owen, Luann Becker, Jen Blank, J.R. Brucato, Luigi Colangeli, Sylvie Derenne, Anne Dutrey, Didier Despois, Antonio Lazcano, Francois Robert, 2006-03-05 Astrobiology a new exciting interdisciplinary research field seeks to unravel the origin and evolution of life wherever it might exist in the Universe The current view of the origin of life on Earth is that it is strongly connected to the origin and evolution of our planet and indeed of the Universe as a whole We are fortunate to be living in an era where centuries of speculation about the two ancient and fundamental problems the origin of life and its prevalence in the Universe are being replaced by experimental science The subject of Astrobiology can be approached from many different perspectives This book is focused on abiogenic organic matter from the viewpoint of astronomy and planetary science and considers its potential relevance to the origins of life on Earth and elsewhere Guided by the review papers in this book the concluding chapter aims to identify key questions to motivate future research and stimulate astrobiological applications of current and future research facilities and space missions Today s rich array of new spacecraft telescopes and dedicated scientists promises a steady flow of discoveries and insights that will ultimately lead us to the answers we seek

Stellar Astrophysics K.S. Cheng, Kam Ching Leung, T.P. Li, 2013-11-11 The Pacific Rim Conferences for the first decade from the mid 1980 s to the mid 1990 s were primarily concerned with binary stars research The Conference expanded to all areas of Stellar Astrophysics for the last two

meetings in Hong Kong at Hong Kong University of Science and Technology in 1997 and at the Hong Kong University in 1999. At the conclusion of the very successful Pacific Rim Conference on Stellar Astrophysics held in Hong Kong University members of the Scientific Organizing Committee began planning for the next conference. We approached Professor Tan Lu of Nanjing University and Professor Tipei Li of the Institute of High Energy Physics about hosting a conference in China. The city of Xi'an in Shaanxi province and a city in Yunnan province were considered to be the most likely locations. It became crucial to find the right person to serve as Chair or Co-chairs for the Local Organizing Committee. Initially Professor Lu was the logical choice but he declined for personal reasons. Professor Li was invited to lead a new department of Astrophysics at Tsinghua University so he could not take on the additional load of chairing the LOC. Professor Gang Zhao of Beijing Astronomical Observatory was approached to take on the task but he also declined. This has been a busy time for Chinese astronomers. The SOC decided to have the conference dedicated to honor Dr. Helmut A.

Neutrino Physics - Proceedings Of Nobel Symposium 129 Lars Bergstrom, O. Botner, Per Carlson, P. O. Hulth, Tommy Ohlsson, 2006-03-27. Nobel Symposium 129 on Neutrino Physics was held at Haga Slott in Enköping, Sweden during August 19-24, 2004. Invited to the symposium were around 40 globally leading researchers in the field of neutrino physics, both experimental and theoretical. The dominant theme of the lectures was neutrino oscillations, which after several years were recently verified by results from the Super Kamiokande detector in Kamioka, Japan and the SNO detector in Sudbury, Canada. Discussion focused especially on effects of neutrino oscillations derived from the presence of matter and the fact that three different neutrinos exist. Since neutrino oscillations imply that neutrinos have mass, this is the first experimental observation that fundamentally deviates from the standard model of particle physics. This is a challenge to both theoretical and experimental physics. The various oscillation parameters will be determined with increased precision in new specially designed experiments. Theoretical physics is working intensively to insert the knowledge that neutrinos have mass into the theoretical models that describe particle physics. The lectures provided a very good description of the intensive situation in the field right now. The topics discussed also included mass models for neutrinos, neutrinos in extra dimensions as well as the seesaw mechanism, which provides a good description of why neutrino masses are so small. This book is A4 size and in full color.

The Dark Universe Mario Livio, 2004-02-26. This book reviews the findings on the composition of the universe, its dynamics, and the implications of both for the evolution of large-scale structure and for fundamental theories of the universe. With each chapter written by a leading expert in the field, topics include massive compact halo objects, the oldest white dwarfs, hot gas in clusters of galaxies, primordial nucleosynthesis, modified Newtonian dynamics, the cosmic mass density, the growth of large-scale structure, and a discussion of dark energy. This book is an invaluable resource for both professional astronomers and graduate students.

The Electromagnetic Spectrum of Neutron Stars Altan Baykal, Sinan K. Yerli, Sitki C. Inam, Sergei Grebenev, 2006-01-20. Neutron stars hold a central place in astrophysics not only because they are made up of the most extreme states of the

condensed matter but also because they are along with white dwarfs and black holes one of the stable configurations that stars reach at the end of stellar evolution Neutron stars possess the highest rotation rates and strongest magnetic fields among all stars They radiate prolifically in high energy electromagnetic radiation and in the radio band This book is devoted to the selected lectures presented in the 6th NATO ASI series entitled The Electromagnetic Spectrum of Neutron Stars in Marmaris Turkey on 7-18 June 2004 This ASI is devoted to the spectral properties of neutron stars Spectral observations of neutron stars help us to understand the magnetospheric emission processes of isolated radio pulsars and the emission processes of accreting neutron stars This volume includes spectral information from the neutron stars in broadest sense namely neutrino and gravitational radiation along with the electromagnetic spectrum We believe that this volume can serve as graduate level of text including the broad range of properties of neutron stars

Anticipatory Learning Classifier Systems Martin V. Butz, 2002-01-31 Anticipatory Learning Classifier Systems describes the state of the art of anticipatory learning classifier systems adaptive rule learning systems that autonomously build anticipatory environmental models An anticipatory model specifies all possible action effects in an environment with respect to given situations It can be used to simulate anticipatory adaptive behavior Anticipatory Learning Classifier Systems highlights how anticipations influence cognitive systems and illustrates the use of anticipations for 1 faster reactivity 2 adaptive behavior beyond reinforcement learning 3 attentional mechanisms 4 simulation of other agents and 5 the implementation of a motivational module The book focuses on a particular evolutionary model learning mechanism a combination of a directed specializing mechanism and a genetic generalizing mechanism Experiments show that anticipatory adaptive behavior can be simulated by exploiting the evolving anticipatory model for even faster model learning planning applications and adaptive behavior beyond reinforcement learning Anticipatory Learning Classifier Systems gives a detailed algorithmic description as well as a program documentation of a C implementation of the system
