By: _____

Part 1: Flame Tests

Part 2: Atomic Spectra

Part 3: Applications of Spectra

In Part One, wooden splints dipped in solutions of metal salts are heated using a Bunsen burn producing different colored flames. By comparing the color given off by an unknown with the known metal salts, the identity of the metal salt can be determined. In Part Two, electricity is passed through the gas discharge tube resulting in different colors. When the light is passed through a diffraction grating, it is broken into components, producing a line spectrum of the element. A comparison of the line spectrum with those of known gases will allow one to determine the identity of the unknown gas. Also, you will investigate the visible light emission of "general" light sources. In Part Three, you will research various applications and/or natural occurrences of line spectra such as astronomy, aurora borealis, fireworks and neon lights.

Exploring the Universe: A Laboratory Guide for Astronomy Mike D. Reynolds, Michael E. Bakich, 2015-01-01 Astronomy is a fun and challenging science for students This manual is intended for one and two semester astronomy courses and uses hands on engaging activities to get students looking at the sky and developing a lifelong interest in astronomy

Astrochemistry Olivia Harper Wilkins, Geoffrey A. Blake, 2021-07-21 The answers to some of the most fundamental questions in science lie between the stars in molecular clouds that serve as celestial laboratories Disentangling the chemistries in extraterrestrial environments can provide clues about how planets form and shed light on problems in terrestrial chemistry that are difficult to investigate in the lab and even the origins of life Astrochemistry takes you on a tour of the molecular universe through time and space starting with the emergence of matter about 13.8 billion years ago From there the tour visits the interstellar medium with an emphasis on molecular clouds where stars are born It then goes through different evolutionary stages of stars and planets and the chemistry that emerges alongside them before ending in our own solar system where you will learn about chemical delivery by objects such as comets and meteorites Laboratory

Experiments in Physics for Modern Astronomy Leslie M. Golden, 2012-11-14 This book presents experiments which will teach physics relevant to astronomy The astronomer as instructor frequently faces this need when his college or university has no astronomy department and any astronomy course is taught in the physics department The physicist as instructor will find this intellectually appealing when faced with teaching an introductory astronomy course From these experiments the student will acquire important analytical tools learn physics appropriate to astronomy and experience instrument calibration and the direct gathering and analysis of data Experiments that can be performed in one laboratory session as well as semester long observation projects are included **Dust in the Universe** M. NASA Laboratory Astrophysics Workshop Farid Salama, 2002 Reports on Astronomy Derek McNally, 2012-12-06 IAU Transactions are published as a volume corresponding to each General Assembly Volume A is produced prior to the Assembly and contains Reports on Astronomy prepared by each Commission President The intention is to summarize the astronomical results that have affected the work of the Commission since the production of the previous Reports up to a time which is about one year prior to the General Assembly Volume B is produced after the Assembly and contains accounts of Commission Meetings which were held together with other material The reports included in the present volume range from outline summaries to lengthy compilations and references *Basic Astronomy Labs* Jay S. Huebner, Michael D. Reynolds, 1996

Providing the tools and know how to apply the principles of astronomy first hand these 43 laboratory exercises each contain an introduction that clearly shows budding astronomers why the particular topic of that lab is of interest and relevant to astronomy About one third of the exercises are devoted solely to observation and no mathematics is required beyond simple high school algebra and trigonometry Organizes exercises into six major topics sky optics and spectroscopy celestial

mechanics solar system stellar properties and exploration and other topics providing clear outlines of what is involved in the exercise its purpose and what procedures and apparatus are to be used Offers variations on standard and popular exercises and includes many that are new and innovative such as The Messier List which helps users discover basic facts about the Milky Way Galaxy by plotting these objects on a star chart Motions of Earth demonstrates just how fast the Earth is moving through space and in which direction it is going and Radioactivity and Time which measures the half life of a short lived isotope and consider radioactive dating and heating of celestial bodies Includes a guide to astronomical pronunciations a guide to the constellations spectral classifications quotes on science and more For astronomers **Exercises in Astronomy**
