

AUTO CAD

INTRODUCTION:

CAD(Computer Aided Drafting and design) as the name itself suggests is much more than just drawing lines for design purposes by electronic means. There are various reasons for using CAD:

- The most potent driving force is competition. Companies used CAD to draft better designs quicker and much more cheaper than their competitors
- Productivity is boosted by a CAD program enabling you to easily draw polygons, ellipses multiple parallel lines that comprise a design.
- Various automatic features like fillets and chamfers help increase the speed of designing.
- The ability of the software to "snap" automatically to create particular geometric points and features will spread the accurate positioning of line work.
- Copy, Rotate and mirror facilities also come in very handy while drawing symmetrical parts.
- Another advantage of a CAD system is its ability to store entities, which are frequently applied on drawings.

COORDINATE SYSTEM :

There are three different types of coordinate systems they are

1. Absolute coordinate system
2. Relative Rectangular coordinate system
3. Relative polar coordinate system

Absolute coordinate System:

In the absolute coordinate system all points are measured from the origin(0,0) . They are suited to situations where you know the exact X and Y location of the point you want to place.

To enter an absolute coordinate use the format (X,Y) Where X is the distance and direction along the horizontal axis from the origin (0,0) and Y is the distance and direction along the vertical axis from the origin (0,0)

Relative Rectangular Coordinate system:
