Automatic Indexing And Abstracting Of Document Texts Author Marie Francine Moens Mar :

Automatic Indexing and Abstracting of Document Texts Marie-Francine Moens, 2013-03-12 Automatic Indexing and Abstracting of Document Texts summarizes the latest techniques of automatic indexing and abstracting and the results of their application. It also places the techniques in the context of the study of text manual indexing and abstracting and the use of the indexing descriptions and abstracts in systems that select documents or information from large collections. Important sections of the book consider the development of new techniques for indexing and abstracting. The techniques involve the following: using text grammars, learning of the themes of the texts including the identification of representative sentences or paragraphs by means of adequate cluster algorithms and learning of classification patterns of texts. In addition, the book is an attempt to illuminate new avenues for future research. *Automatic Indexing and Abstracting of Document Texts* is an excellent reference for researchers and professionals working in the field of content management and information retrieval.

Indexing and Abstracting in Theory and Practice Frederick Wilfrid Lancaster, 1998 A textbook for a course in either an academic or a professional education program for librarians. Reviews the principles, practice, consistency and quality of indexing, the types and functions of abstracts, natural language in informing retrieval and the future of indexing and abstracting services. Automatic Indexing: a State-of-the-art Report Mary Elizabeth Stevens, 1970

Introduction to Indexing and Abstracting Donald B. Cleveland, Ana D. Cleveland, 1983 Based on new research and years of practical experience, this guide presents the basic knowledge necessary to become a professional indexer. Synthesizing the thinking and experience of indexers and abstractors over the years, the book introduces readers to such fundamentals as the nature of information, the organization of information vocabulary, control types of indexes and abstracts, evaluation of indexing and the use of computers. A new chapter on indexing and the Internet has been added, as has a chapter that lists Web resources for indexers and abstractors. The work concludes with a discussion of the education, training and job opportunities of the profession as well as a look to the future. With its simple but thorough approach, this book provides readers with a broad overview of the professions, processes and art of indexing and abstracting.

Indexing and Retrieval of Non-text Information Diane Rasmussen Neal, 2012 The scope of this volume will encompass a collection of research papers related to indexing and retrieval of online non-text information. In recent years, the Internet has seen an exponential increase in the number of documents placed online that are not in textual format. These documents appear in a variety of contexts such as user-generated content, sharing websites, social networking websites, etc. and formats including photographs, videos, recorded music, data visualizations, etc. The prevalence of these contexts and data formats presents a particularly challenging task to information indexing and retrieval research due to many difficulties such as assigning suitable semantic metadata, processing and extracting non-textual content automatically, and designing retrieval systems that speak in the native language of non-text documents.
