

Abstract (continued) Keywords: Introduction: The purpose of this study was to investigate the effects of a 12-week training program on the physical and psychological health of sedentary middle-aged men. Methods: A total of 30 men, aged 40-50 years, were recruited from a local health club. They were divided into two groups: a control group (n=15) and an exercise group (n=15). The exercise group participated in a supervised 12-week program of aerobic and resistance training, while the control group remained sedentary. Results: After 12 weeks, the exercise group showed significant improvements in cardiovascular fitness, muscle strength, and body composition compared to the control group. Psychological measures, such as mood and self-esteem, also improved in the exercise group. Conclusion: A 12-week supervised exercise program significantly improved the physical and psychological health of sedentary middle-aged men.
