Absolute magnitude: the brightness a star would be as seen from a distance of 10 parsecs
Absolute Zero: the lowest possible temperature, at which substances contain no heat energy, and atomic movement has stopped
Accretion: accumulation of dust and gas into larger bodies such as stars, planets, and moons
Accretion disk: a disk of hot, glowing matter spiraling into a black hole
Active galaxy: a galaxy undergoing a violent outburst in its central regions
Adaptive optics: the technology that allows, based on a laser beam aimed through the atmosphere, a computer to make very slight modifications to a telescope's mirror, which will correct for atmospheric distortions
Albedo: the reflecting power of a non-luminous body; a perfect reflector would have an albedo of 100 per cent
Albedo feature: a dark or light marking on the surface of an object that may not be a geological or topographical feature
Altazimuth mounting: a telescope mounting that swings from side to side parallel to the horizon, and up and down
Angstrom unit: the hundred-millionth part of a centimeter (10^{-7} m)
Annihilation: total destruction of matter in a burst of energy
Anthropic principle: we see the universe the way it is because if it were different we would not be here to observe it
Antigravity: a gravitational field that repels, rather than attracts, matter and light rays
Antimatter: the exact opposite of matter; when matter meets the tiny amount of antimatter in the universe, the two annihilate each other
Antiparticle: an atomic particle that has exactly the opposite properties of its counterpart (e.g. a positron and an electron)
Antipodal point: the point that is directly on the opposite side of the planet
Aperture: the diameter of an opening through which light passes in an optical instrument
Aphelion: the position of a planet (or other body) when it is at its furthest from the sun

Aurora: currents and arcs of light in the sky visible over middle and high latitudes; they are caused by particles from the sun hitting the Earth's atmosphere and causing some of its gases to glow
Axle: the imaginary line through the center of a planet, star, or galaxy around which it rotates; also, a similar line through a telescope mounting
Baryon: baryons are composed of three quarks; they include protons and neutrons
Big Bang: the violent event that gave birth to our universe
Big Crunch: the ultimate collapse of the universe that may take place in the future if the universe starts to contract
Binary system: system of two stars that orbit around each other
Black dwarf: a dead star with a maximum possible mass of 1.4 solar masses that has cooled to a point where it no longer glows with residual heat
Black hole: a collapsed object with such strong gravity that nothing can escape it; as a result, the object is black, and it is a hole because nothing can escape from it
Blazar: a type of active galaxy that is angled in such a way that we look almost directly at its accretion disk and jet

& Astrophysics Ranjan Roy, Daniel, P. J. Lavakare, S. Ramadurai, 1969 **An Extensive Republic** Robert A. Gross, Mary

Kelley, 2010 This impressive collaborative effort by two dozen leading authorities in the field will be essential reading for any serious student of the history of American publishing and print culture during one of its most crucially transformative periods. Lawrence Buell, Harvard University. A magnificent achievement. Brilliant editing and graceful writing shatter many old assumptions about the world of the Founders. Linking intellectual history with politics, social change, and the distinctive experiences of women, African Americans, and Indians. An Extensive Republic is the rare reference book that is also a mesmerizing read. Linda K. Kerber, author of *No Constitutional Right to Be Ladies: Women and the Obligations of Citizenship*. This volume provides a fascinating revisionist history of the United States through its focus on what was printed, how the economy of the book trades worked, who was reading, and what role reading came to assume in all sorts of people's lives. Editors Gross and Kelley make a strong team, and the contributors represent an array of disciplines suitable to the equally wide range of printed material in the United States between 1790 and 1840. Patricia Crain, New York University. Volume 2 of *A History of the Book in America* documents the development of a distinctive culture of print in the new American republic. Between 1790 and 1840, printing and publishing expanded, and literate publics provided a ready market for novels, almanacs, newspapers, tracts, and periodicals. Government, business, and reform drove the dissemination of print. Through laws and subsidies, state and federal authorities promoted an informed citizenry. Entrepreneurs responded to rising demand by investing in new technologies and altering the conduct of publishing. Voluntary societies launched libraries, lyceums, and schools, and relied on print to spread religion, redeem morals, and advance benevolent goals. Out of all this ferment emerged new and diverse communities of citizens linked together in a decentralized print culture where citizenship meant literacy and print meant power. Yet in a diverse and far-flung nation, regional differences persisted, and older forms of oral and handwritten communication offered alternatives to print. The early republic was a world of mixed media. *A History of the Book in America*. Robert A. Gross, Mary Kelley, 2010-07-15.
