Sustainable Biofloc Systems for Marine Shrimp Tzachi Matzliach Samocha, 2019-07-25 Sustainable Biofloc Systems for Marine Shrimp describes the biofloc dominated aquaculture systems developed over 20 years of research at Texas A M AgriLife Research Mariculture Laboratory for the nursery and grow out production of the Pacific White Shrimp *Litopenaeus vannamei* The book is useful for all stakeholders with special attention given to entrepreneurs interested in building a pilot biofloc dominated system In addition to the content of its 15 chapters that cover topics on design operation and economic analysis the book includes appendices that expand on relevant topics links to Excel sheets that assist in calculations and video links that illustrate important operations tasks Presents the most recent trials on nursery gross out of *L. vannamei* Includes a discussion of site selection equipment options and water sources Provides a step by step guides from tank preparation to feeding and harvest **Shrimp acute hepatopancreatic necrosis disease strategy manual** Food and Agriculture Organization of the United Nations , 2020-11-24 The contents of this Shrimp acute hepatopancreatic necrosis

disease strategy manual provides information and guidance relevant to the development of policies to respond to outbreaks of acute hepatopancreatic necrosis disease AHPND in farmed marine shrimp. The etiologic agents for AHPND are virulent strains of bacteria belonging to the genus *Vibrio* parahaemolyticus and related species which harbor specific toxin genes. While these bacterial species are part of the normal microflora of the marine environment, they may cause substantial mortalities in whiteleg shrimp *Penaeus vannamei* and giant tiger prawn *Penaeus monodon* cultured in countries in Asia and the Americas. These strains of these *Vibrio* bacteria secrete a PirABvp binary toxin resulting in sloughing of tubule epithelial cells and dysfunctions of the hepatopancreas. In the acute form, mortality can reach 100 percent in affected ponds. Chronic presentation of this disease involves secondary bacterial infection of hepatopancreas and running mortality over the culture cycle. Acute or chronic presentation would greatly depend on the culture conditions. This disease can be considered a toxicosis rather than an infection. Economic losses due to this disease have amounted to over USD 7 billion annually. Further outbreaks of AHPND, particularly in areas that are currently free of the disease, would be expected to experience similar devastating effects on local shrimp producers and the surrounding communities, and thus there is an urgent need to develop a contingency plan to control and eradicate this disease. This manual includes information on: 1. the nature of AHPND; a brief review of current knowledge in disease etiology, susceptible species, and global distribution; 2. diagnosis of disease; a description of gross clinical signs and laboratory methods; 3. prevention and treatment; farm management, the use and development of antibiotics, bacteriophages, probiotics, disease-tolerant shrimp, shrimp immunity, and vaccination; 4. epidemiology, AHPND's geographic distribution, genotype, persistence in the environment, reservoir hosts, modes of transmission, risk factors, and economic impacts; 5. principles of control and eradication, methods for containment, mitigation, and eradication of AHPND, and trade and industry considerations; and 6. policy development and implementation. AHPND-specific objectives, options, and strategies for eradication and control, education, capacity building, funding, and compensation.

Proceedings of the 2022 Annual Technology, Applied Science and Engineering Conference (ATASEC 2022) Rosa Andrie Asmara, Arie Rachmad Syulistyo, Muhammad Shulhan Khairy, Vivi Nur Wijayaningrum, Indrazno Siradjuddin, Septian Enggar Sukmana, 2023-02-10. This is an open access book. The 4th Annual Technology Applied Science and Engineering Conference ATASEC 2022 is an annual reputable event organized with a motivation to provide an excellent international platform for the academicians, researchers, engineers, industrial participants, and research students around the world to share their research findings. ATASEC 2022 was performed online using Zoom platform on September 15th-16th, 2022. ATASEC 2022 theme is Science Technology Innovative Academic and Vocational Research Towards Product Development Through Industrial and Educational Cooperation. It addresses researchers and industries from all areas of advanced technology and science. It provides an international forum to present advances in the state of the art, identify emerging research topics, and together define the future of these exciting research domains. The conference will be enriched with renowned keynote speakers.

Sustainable Aquaculture Techniques Martha Hernandez-Vergara, Carlos Perez-Rostro, 2014-02-19 This book presents some innovative developments in sustainable aquaculture practices in the context of environmental protection and seafood production techniques. The chapters are written by experts in their respective areas so that their contribution represents the progress of their research which is intended to mark the current frontier in aquaculture practices. Every chapter presents techniques that contribute to good aquaculture practices where direct and vital nutrition and food as a source of energy and biomass generation is fundamentally based. We hope this book supports producers and researchers in their activities and helps to maintain a spirit of environmental protection in the context of production of high quality nutritional food. Biofloc Fish Farming - An Advanced Fish Farming System Kallol Parida, 2024-06-30 Why You Should Get This eBook on Biofloc Fish Farming I m Kallol Parida the creator of the Road to Biofloc YouTube channel where I share my hands on research in aquaculture. Novel Approaches Toward Sustainable Tilapia Aquaculture Seyed Hossein Hoseinifar, Hien Van Doan, 2023-12-29 The global human population will reach nine billion by 2050 and seafood is projected to be the primary food source to sustain such a large population. According to a recent World Bank report aquaculture will be the prime source of seafood by 2030. Tilapia is one of the promising species for commercial aquaculture and one of the second most farmed fish worldwide. Given the issues raised by Antibiotic misuse in intensive aquaculture such as the occurrence of resistant bacteria it is necessary to develop environment friendly strategies that could be used to improve production in a sustainable manner. Also there is a need to establish the best aquaculture practice BAP approaches to avoid

significant disruption to the ecosystem the loss of biodiversity and substantial pollution impact on the environment The book covers the recent findings regarding sustainable tilapia farming through environment friendly approaches This book contains chapters that cover the current status of world tilapia farming and the concept of sustainability of tilapia culture Chap 1 Chap 2 discusses the health management of tilapia with a particular focus on various diseases and treatments Chap 3 provides an updated view of the possible effects of feed additives on tilapia reproductive performance Chap 4 5 and 6 cover the recent findings on the gut microbiota of tilapia with a particular focus on structure and modulation Chap 7 focuses on the use of medicinal plants for sustainable tilapia farming Chap 8 provides insights into the application of alternative protein sources to decrease fish meal consumption Chap 9 highlights the importance of culture systems for the development of sustainable tilapia aquaculture We believe the current book will be very helpful to academics researchers and policy makers in aquaculture
