a chip micro cooling *Nano Optoelectronic Sensors and Devices* Ning Xi, King Lai, 2011-10-14 Nanophotonics has emerged as a major technology and applications domain exploiting the interaction of light emitting and light sensing nanostructured materials. These devices are lightweight, highly efficient, low on power consumption and are cost effective to produce. The authors of this book have been involved in pioneering work in manufacturing photonic devices from carbon nanotube (CNT) nanowires and provide a series of practical guidelines for their design and manufacture using processes such as nano robotic manipulation and assembly methods. They also introduce the design and operational principles of opto electrical sensing devices at the nano scale. Thermal annealing and packaging processes are also covered as key elements in a scalable manufacturing process. Examples of applications of different nanowire based photonic devices are presented. These include applications in the fields of electronics e.g. FET, CNT Schottky diode and solar energy. Discusses opto electronic nanomaterials characterization and properties from an engineering perspective enabling the commercialization of key emerging technologies. Provides scalable techniques for nanowire structure growth, manipulation and assembly i.e. synthesis. Explores key application areas such as sensing, electronics and solar energy.

Ceramic Thick Films for MEMS and Microdevices
Robert A. Dorey, 2011-10-21 The MEMS (Micro Electro Mechanical Systems) market returned to growth in 2010. The total MEMS market is worth about 6.5 billion, up more than 11 percent from last year and nearly as high as its historic peak in 2007. MEMS devices are used across sectors as diverse as automotive, aerospace, medical, industrial process control, instrumentation and telecommunications, forming the nerve center of products including airbag crash sensors, pressure sensors, biosensors and ink jet printer heads. Part of the MEMS cluster within the Micro Nano Technologies Series, this book covers the fabrication techniques and applications of thick film piezoelectric micro electromechanical systems (MEMS). It includes examples of applications where the piezoelectric thick films have been used, illustrating how the fabrication process relates to the properties and performance of the resulting device. Other topics include top down and bottom up fabrication of thick film MEMS, integration of thick films with other materials, effect of microstructure on properties, device performance etc. Provides detailed guidance on the fabrication techniques and applications of thick film MEMS for engineers and R D groups. Written by a single author, this book provides a clear, coherently written guide to this important emerging technology. Covers materials, fabrication and applications in one book.

Nanotechnology Jeremy Ramsden, 2011-06-22 This book provides an overview of the rapidly growing and developing field of nanotechnology, focusing on key essentials and structured around a robust anatomy of the subject. The newcomer to nanotechnology who may well have a strong background in one of the traditional disciplines such as physics, mechanical or electrical engineering, chemistry or biology, or who may have been working in microelectromechanical systems (MEMS) technology, is confronted with a bewildering range of information. This book brings together the principles, theory and practice of nanotechnology, giving a broad yet authoritative introduction to the possibilities and limitations of this exciting field. Succinct chapter summaries allow readers to grasp quickly the concepts.
